CONTROLLING BIOFILM

Naturally present in mixers, taps and pipework, biofilm is a collection of microorganisms (bacteria, algae, fungi, etc.) adhering to each other and to surfaces that are generally in contact with water, and which is characterised by the secretion of a protective and adhesive matrix (slime).

Various studies have shown that, regardless of the material used (copper, CPVC, stainless steel, polypropylene, etc.), biofilm forms systematically after several weeks or months even on biocidal materials.

99.5% of bacteria found in these installations are trapped in the biofilm, which provides the ideal environment (water, temperature and nutritional conditions) for them to proliferate. If the conditions are favourable, the bacteria multiply and form aggregates that can easily become detached and contaminate the water supply.

Biofilm is impossible to eradicate, but its development can still be controlled.

THE FIGHT AGAINST WATERBORNE BACTERIA

Infection control must be the priority for healthcare facilities, which shelter many germs such as viruses and bacteria.

There are two types of waterborne bacteria which are responsible for healthcare acquired infections in hospitals:

- bacteria in the system which develop when in contact with water e.g. *Legionella spp.*
- bacteria at the point-of-use (water controls) which develop when in contact with air/water e.g. *Pseudomonas aeruginosa*, *Mycobacterium avium*, *Mycobacterium xenopi*, etc.

Since these two types of bacteria are very different, bacteriological monitoring must be appropriate for both types.

LEGIONELLA

This bacteria lives naturally in fresh water and man-made water features.

For optimal development *Legionella* requires 2 main elements:

- water at a temperature between 25°C and 45°C.
- stagnant water and the presence of other microorganisms capable of providing nutrients that its own metabolism is unable to produce, in addition to scale or corrosion.

Human contamination occurs via the respiratory route (inhaling contaminated water in aerosol format) and can lead to a serious pulmonary infection: legionellosis.

517
cases of Legionnaire's disease in the UK
Source: ECDC (European Centre for Disease Prevention and Control), 2019

MONITORING FOR LEGIONELLA

The United Kingdom, France, Germany and the majority of the European countries have specific requirements for monitoring for bacteria in the water distribution system.

These regulations have a common premise (circulating loops, hot water temperatures, etc.) but they also have specific aspects that could provide inspiration for other countries.

In the majority of European countries there is a legal obligation to safeguard the bacteriological quality of the water in the system by regular monitoring, sampling and analysis. However, the methods and subsequent follow-up action differ.

In France, the search for *Legionella* is obligatory. The Directive of 1st February, 2010 identifies three levels of monitoring and sampling protocols. Since 1st January, 2012, monitoring has been extended to all buildings open to the public. Germany has adopted the same threshold levels as France, while the United Kingdom is stricter: it conducts additional testing at levels over 100 Colony Forming Units per litre (CFU/L) and initiates curative procedures above 1,000 CFU/L.

Monitoring levels for *Legionella spp.*:

Alert level	< 100 CFU/L
Remedial action	> 100 CFU/L up to 1,000 CFU/L
Unacceptable level	> 1,000 CFU/L

CFU/L: Colony forming units/Litre

For severely immunocompromised high-risk patients in hospitals the draw-off at the point-of-use should always be free from *Legionella spp.* bacteria.

PSEUDOMONAS AERUGINOSA

Almost 40% of all cases of *Pseudomonas aeruginosa* originate while the patient is in hospital care (39%).

Pseudomonas aeruginosa, requires 2 elements in order to develop:

- water at a temperature between 4°C and 42°C (optimal development between 30°C and 37°C).
- the ability to oxidise.

Pseudomonas aeruginosa is transmitted by hand by healthcare staff and via infected medical equipment. Invasive surgery presents a high risk of transmission of this type of infectious agent.

There are several levels of *Pseudomonas aeruginosa* contamination.

Pseudomonas aeruginosa development in the spout

Pseudomonas aeruginosa primarily contaminates mixer and tap spouts, since it needs a mixture of air and water to develop.

Biofilm, niches and cavities in the spout walls protect the bacteria from treatments, and provide the ideal environment for the bacteria to proliferate.

At the outlet, *Pseudomonas aeruginosa* finds all the necessary conditions to develop and proliferate, establishing permanent colonies in mixers and taps.

Even cleaning spouts and flow straighteners regularly is ineffective.

Pseudomonas aeruginosa development in flexible hoses and pipework

Once established in the biofilm in mixers and taps, *Pseudomonas aeruginosa* continues to develop and will gradually colonise the flexibles and pipework unless an effective solution is put in place.

By this stage it is impossible to eradicate *Pseudomonas aeruginosa*, which then becomes a threat to the entire water system.

MONITORING FOR PSEUDOMONAS AERUGINOSA

The Department of Health and Social Care (DHSC) conducted a study into contamination by *Pseudomonas aeruginosa* in mixers/taps and the water supply system.

This study resulted in the publication of technical guidance written specifically for augmented care units. This latter was incorporated in the revised version of the HTM 04-01 Part B in 2016 which outlines what action to take when healthcare facilities become contaminated with *Pseudomonas aeruginosa*.

In order to assess the level of water contamination by *Pseudomonas aeruginosa*, the DHSC recommends sampling the first water to be delivered from the outlet.

Furthermore, to maximise the recovery of free-floating bacteria it recommends taking samples:

- at least 2 hours (preferably longer) after the last draw-off at outlets used on a daily basis.
- on outlets that are used infrequently.

The Department of Health and Social Care (DHSC), Ministry of Health for the United Kingdom, has addressed the issue of tap and water system contamination by these bacteria.

The *Health Technical Memorandum* (HTM 04-01) updated in 2017, provides guidance on best practice for monitoring and testing for these two pathogens, and identifying the level of contamination in water, to ensure compliance with current regulations.

For *Pseudomonas aeruginosa*, action is initiated as soon as the alert level is reached, that is to say, above 1 CFU/100mL, as is done in France.

In Germany, in the framework of monitoring for *Pseudomonas aeruginosa*, hospitals and healthcare establishments must test twice a year. The satisfactory level is 0 CFU/100mL.

figures

Monitoring levels for *Pseudomonas aeruginosa*:

Satisfactory level	< 1 CFU/100mL
Unacceptable level	> 10 CFU/100mL

CFU/mL: Colony Forming Units/millilitre

In its report the DHSC clearly indicates that disinfecting the water supply (hot and cold) is insufficient for removing an established biofilm. It recommends that, where installed, removable taps should be periodically removed for internal cleaning to remove any biofilm and bacteria residing within.

Healthcare facilities should establish regular cleaning protocols. See more about DELABIE's solutions on page 8.

The bacteria that form biofilms on the surface of certain materials are responsible for one third of healthcare-acquired infections (HCAIs).

According to the *National Institute for Health and Care Excellence* (NICE, 2014), it is estimated that 300,000 patients in England acquire an HCAI as a result of care within the NHS. In 2018/19, the prevalence of HCAIs in hospitals in England was 7.5%.

A 2012 study, repeated in 2017, by the French national *Institution for Health Monitoring* (IHM), found that one in twenty (5%) French healthcare patients contracted an healthcare acquired infection. This represents approx.

750,000 infections/year, of which 4,200 were fatal.

The *European Centre for Disease Prevention and Control* (ECDC) calculates that HCAIs affect 4.1 million patients every year and are responsible for 37,000 deaths annually.

Not forgetting that non-healthcare buildings that are open to the public are also at high risk. In effect, according to statistics by the *French IHM*, 47% of *Legionella* cases identified in 2019 were linked to visits to hotels, tourist accommodation, campsites, swimming pools and sports stadia, compared to 11% linked to healthcare facilities (hospitals, retirement homes, etc.).

EUROPEAN WATER QUALITY REGULATIONS

Stagnation prohibited

Regular flush

According to the French, German and English regulations, water stagnation (in sanitary installations and mixers and taps) is a key factor in bacterial contamination.

The European standard EN 806-5 requires that those sections of the installation that are used infrequently should be flushed at regular intervals. The recommended interval is once a week.

All public and commercial buildings are affected, in particular schools and council buildings during the school holidays, campsites out of season, unoccupied hospital rooms, etc.

The German directive of April 2013, *Hygiene in Drinking Water Installations VDI/DVGW 6023*, requires purging to be carried out after 72 hours of stagnation in a sanitary installation (this also includes WC cisterns). Note that the water in the bypass is not sufficiently renewed. They are therefore prohibited. If an installation is not used for 72 hours, rigorous protocols are put in place. DELABIE sees this as a step forward and proposes technical solutions to meet this requirement (see *opposite*: electronic controls).

“The German directive requires purging to be carried out after 72 hours of stagnation.”

Undersized pipework

The German regulation strictly prohibits oversized pipework because it promotes bacterial growth by reducing the water velocity.

DELABIE, along the same lines, recommends slightly decreasing the diameter of the pipes to increase the water velocity to 2m/sec. (likewise the French regulation (DTU) recommends 1.5m/sec.).

This measure prevents the excessive development of biofilm and helps to reduce the risk of contamination without increasing noise levels.

“Oversized pipes are strictly prohibited.”

Training

Understanding the problems associated with bacterial growth in water systems helps to limit the risk of contamination.

Although French legislators have not yet focused on training those responsible for the water system, it is embedded and pursued in Germany (with three training levels, depending on the level of responsibility) and in the United Kingdom (with personnel competency and training programmes monitored by the *Water Safety Group*).

“Training those responsible helps to control bacterial proliferation.”

Removable mixers and taps

In addition to preventative measures, the HSE (*Health and Safety Executive*) recommends the use of mixers and taps that can be easily removed for regular internal cleaning; a mechanical intervention that is effective for removing biofilm.

Circulating loops

A circulating loop up to the point-of-use is not recommended. It doubles the length of the pipework and therefore doubles the water volume. The biofilm surface is increased and, as a result, the risk of bacterial development. Moreover, it makes it difficult to maintain high temperatures at all points in the circulating loop.

Finally, it also makes it difficult to keep the pipe run volume to less than the 3 litres recommended by European directives. Indeed, if the water temperature in a circulating loop is less than 50°C or 55°C (depending on the country), the water volume in the circulating loop must be included in the 3-litre maximum calculation.

“A circulating loop up to the point-of-use is not recommended.”

Building Management Systems

Contrary to popular belief, Building Management Systems are not recommended by European directives as they can be complicated, difficult to handle and extremely costly and do not take away liability if a problem occurs.

Bypass prohibited

Measuring pressure

Measuring the temperature

Training relevant personnel

DELABIE'S SPECIFIC ADVANTAGES

DELABIE is particularly concerned with the fight against, and prevention of, bacterial development. The company is constantly developing new products with unique features.

Adapted water controls

DELABIE offers water controls with **low water volumes** which have **smooth surfaces** in contact with the water, and **removable** mixers and taps, fitted with flexible hoses or tails, with reduced water passages... in order to reduce the risk of bacterial development considerably.

For more information see page 8.

Electronic controls

DELABIE's models are programmed with a periodic duty flush.

An **automatic flush** takes place every 24 hours after the last use to prevent water stagnation and, therefore, bacterial proliferation.

Similarly, DELABIE has developed a **reduced-stagnation solenoid valve (patented)**.

Unlike all other available models which have areas of permanent water stagnation, the water is completely renewed inside DELABIE's solenoid valve.

For more information see page 26.

Thanks to these characteristics, DELABIE's electronic controls are the only ones to guarantee a regular and complete renewal of the water in all the internal parts, avoiding any risk of bacterial proliferation. They are therefore the only ones which comply with the European standard EN 806-5.

Reduced-stagnation solenoid valve

DELABIE's electronic controls are unique in being able to guarantee a **regular and complete renewal of the water** in all the internal parts.

Required by the standard EN 806-5

Thermostatic mixing valves

To reduce the risk of bacterial development (Legionella etc.) public buildings should distribute hot water at temperatures of at least 55°C in healthcare facilities (50°C in other non-domestic buildings).

To reduce the risk of scalding, all DELABIE's thermostatic mixing valves are fitted with **special safety devices**.

They are supplied with a maximum temperature limiter pre-set at the factory.

The PREMIX NANO thermostatic mixing valve allows the facilities manager to maintain temperatures that comply with the regulations while ensuring user safety.

For more information see page 102.

Scalding can also be prevented at the point-of-use itself thanks to the SECURITHERM range of mixers and shower panels.

PREMIX NANO and SECURITHERM thermostatic mixers ensure that the hot water supply shuts off if the cold water supply fails.

WC systems with direct flush and no cistern

The insides of toilet cisterns are covered in biofilm. The large surface area of cisterns, and water stagnation, make the cistern a major risk factor for the proliferation of bacteria that can spread in sanitary installations.

By removing the need for toilet cisterns, DELABIE's direct flush systems eliminate the risk of bacterial proliferation.

For more information see pages 157 - 159.

DELABIE'S SOLUTIONS FOR INFECTION CONTROL

THE BIOSAFE CONCEPT

Pseudomonas aeruginosa mostly contaminates mixers and taps at the outlet, i.e. inside the spout. As a result, this part of the mixer/tap should be the subject of special attention in order to limit bacterial development. To this end, DELABIE has designed specialist controls that facilitate preventative action and, if necessary, curative action if contamination occurs.

BIOCLIP removable mixers and taps for cleaning/disinfection

The BIOCLIP range of mixers and taps can be fitted with specialist spouts and the whole interior can be cleaned - the only way to eliminate biofilm completely - helping to fight effectively against bacterial development.

- **Mixers with removable BIOCLIP spouts**

Mixers are supplied with two stainless steel spouts. The second spout ensures continuous use while the first is being cleaned. Alternative options are:

- Disposable spouts: each spout must be replaced periodically, depending on the type of installation.
- BIOFIL filtration spouts: these spouts guarantee the bacteriological quality of the water.

- **BIOCLIP removable mixers**

Mixers that can be completely removed from their base for curative or preventative measures in healthcare facilities:

- **Curative action:** bacteriological monitoring in healthcare environments sometimes requires remedial action. If mixers and taps are contaminated by *Legionella spp.* or *Pseudomonas aeruginosa*, they can be easily removed by maintenance staff to enable the interior to be completely cleaned.
- **Preventative action:** to minimise the risk of bacterial proliferation in mixers and taps, DELABIE recommends concentrating on preventative measures.

BIOCLIP mixers and taps allow healthcare facilities to establish regular cleaning protocols (from every 6 months to every 2 years depending on the type of facility) to eliminate biofilm and bacteria.

Mixers and taps with low volume of standing water

Some of DELABIE's mixers have specifically designed interiors that reduce the volume of standing water in the body, and thus significantly reduce the risk of bacterial development.

Mixers and taps with smooth interiors

All the internal parts of certain DELABIE mixers and taps are completely smooth, reducing biofilm attachment and making it easier to treat.

A study by the BioPI laboratory and the Department for Biological Studies at Jules Verne University in Amiens, France showed that under constant conditions, mixers and taps with smooth interiors have *Pseudomonas aeruginosa* contamination levels 14 times lower than those mixers and taps with rough bodies.

Electronic controls with duty flush programme

To overcome water stagnation in water systems, all DELABIE's electronic controls are programmed with a periodic duty flush to prevent bacterial proliferation. An automatic flush takes place for ~60 seconds every 24 hours after the last use (programmable on some models). As a result, bacteria do not have the opportunity to develop.

Water controls without non-return valves Cross flow between SHW/SCW is impossible

DELABIE has developed a unique, patented mechanism for its thermostatic mixers which closes the Hot and Cold Water directly at the inlets, meaning there is no need for non-return valves. The risk of cross flow is eliminated.

See opposite for more information.

BIOSAFE hygienic outlet

Made from Hostaform®, its smooth internal surface provides nowhere for impurities or scale to adhere reducing the emergence and spread of bacteria and germs in damp conditions.

It can only be installed on a mixer or tap that already has a restricted flow rate to ensure a good flow with no splashing.

For more information see page 99.

BIOFIL point-of-use filtration

BIOFIL anti-*Legionella* and all-germ filters guarantee bacteriologically controlled water at the point-of-use and protect the user's well-being.

Each BIOFIL filter incorporates a hollow fibre membrane with a water filtration threshold of 0.1 micron nominal-rated. They deliver water free from microorganisms, providing total protection against waterborne infection.

The BIOFIL range includes tap and wall-mounted shower filters, shower head filters and spout filters. For more information see pages 21 - 23.

THE END OF NON-RETURN VALVES

The use of water in healthcare facilities creates significant sanitary challenges. Bacterial contamination in water systems represents an extremely high risk to the health of those patients with weakened immune systems, mainly linked to the proliferation of *Legionella* spp. and *Pseudomonas aeruginosa*.

Cross flow between the hot and cold water inevitably creates conditions favourable to bacterial development in water controls. To reduce this risk, all conventional thermostatic mixers have non-return valves. Conventionally used to prevent the hot water from entering the cold water supply (or vice-versa, according to the higher pressure), these valves are now considered to be principal causes of bacterial development. However, **non-return valves are not reliable** because sooner or later impurities prevent them from being watertight, meaning they cannot function correctly. In the event of failure, **they are responsible for SHW/SCW cross flow, causing irrecoverable conditions favourable to bacterial development inside mixers.**

A new French standard, NF Medical which came into effect at the end of 2016, demands that a mixer shuts off prior to the mixing chamber, removing the need for non-return valves on water inlets.

Excerpts from a legal expert's verdict in the investigation into the deaths, caused by Legionella, of 6 residents of a French retirement home between 2006 and 2008 conclude that: *"the drop-off of the zinc and copper hydroxide found on the non-return valves located upstream of the thermostatic mixer are responsible for the CW being heated up by the HW. It's the triggering factor for bacterial proliferation ..."*

It is, therefore, fundamental that **mixers' closing mechanisms are located upstream of the mixing chamber to prevent any cross flow between SHW and SCW. As a result, the non-return valves, whose reliability cannot be guaranteed, become redundant.**

DELABIE has developed a unique, patented mechanism for its thermostatic mixers which does not need non-return valves. The risk of cross flow is therefore completely eliminated. For more information see pages 112 and 116.

SECURITHERM BIOSAFE

SECURITHERM

BIOSAFE

DELABIE THERMOSTATIC TECHNOLOGY

By closing the control 4, the SHW is closed. The thermostatic cell therefore closes the SCW. There is no risk of cross flow between SHW and SCW.

CONVENTIONAL THERMOSTATIC TECHNOLOGY

Sooner or later, the non-return valves are obstructed by impurities causing cross flow between the SHW and the SCW, responsible for bacterial development.

Anti-scalding safety

Maximum temperature limiter

Temperature stability

Discover our SECURITHERM solutions video

DELABIE'S SOLUTIONS TO REDUCE THE RISK OF SCALDING

THE SECURITHERM CONCEPT

To reduce the risk of bacterial development (*Legionella spp.*, *Pseudomonas aeruginosa*, etc.) healthcare facilities must produce and distribute hot water at high temperatures (HSE Approved Code of Practice and Guidance document HSG274 Part 2). The risk of cutaneous scalding increases considerably for hospital patients with reduced sensitivity and/or slower reflexes.

According to the World Health Organisation, hot water is a major cause of scalding (between 20 and 30%).

In the year to March 2021, 602 people were admitted to hospital with scald injuries from taps.

Almost half of burns and scald victims are under 4 or over 70 years old (source: NHS Digital).

This risk is particularly high for mentally or physically disabled people or the elderly, mainly if they accidentally change the temperature setting from its initial setting.

It is therefore essential to maintain a maximum temperature that reduces the risk of scalding by introducing safety devices.

HSE guidelines state that where a significant risk of scalding has been identified, point-of-use TMVs should be considered for baths and showers to deliver water at safe temperatures (see pages 102 and 147). The risk of scalding can also be controlled at the point-of-use thanks to the SECURITHERM range of mixers and shower panels.

Hot sanitary water - 20 to 30% of scalds worldwide

Correlation between temperature and the risk of scalding:

At 60°C	3 rd degree burns in 3 seconds on average: 5 seconds for an adult, 1 - 2 seconds for a child
At 50°C	Burns in 7 seconds 3 rd degree burns in 100 sec.

Source: Centre for Burns, St Joseph and St Luc Hospital in Lyon, France

Maximum temperature limiter

All DELABIE's mixers are supplied with a maximum temperature limiter. The user cannot increase the temperature above the temperature limit (maximum temperature depends on the model) reducing the risk of scalding.

The temperature limiter is set at the factory to save time during installation, but it may be adjusted by the installer.

Temperature stability

• SECURITHERM thermostatic point-of-use mixers:

A thermostatic cartridge guarantees temperature stability regardless of variations of pressure or flow rate in the system.

• SECURITHERM mixers with EP cartridge:

The EP pressure-balancing cartridge compensates for the unavoidable variations in pressure in the system, ensuring that the water temperature at the outlet remains constant. It also removes the need for pressure regulators upstream of the mixer, which are complex and have large cavities and several membranes which provide additional niches where microbes can develop.

Automatic anti-scalding failsafe

SECURITHERM technology ensures an automatic and instant anti-scalding failsafe for users.

• SECURITHERM thermostatic point-of-use mixers:

In the event of failure of the Cold Water supply, thermostatic mixers shut off the Hot Water immediately.
In the event of failure of the Hot Water supply, they also shut off the Cold Water.

• SECURITHERM mixers with EP cartridge:

In the event of Cold Water failure, the Hot Water flow rate on EP mixers is reduced therefore removing the risk of scalding for the user. In the event of Hot Water failure, the Cold Water is likewise reduced.

Securitouch thermal insulation

DELABIE has placed an increased emphasis on safety to provide superior comfort thanks to Securitouch technology.

In general, the bodies of mixers are made from chrome-plated brass. Since metal is an effective heat conductor, it is very easy for people to burn themselves simply by touching the mixer.

With Securitouch technology any risk of burns from the patient touching the mixer or grabbing it following a slip or loss of balance in the shower is eliminated.

• **SECURITHERM thermostatic point-of-use mixers:** SECURITHERM thermostatic mixers have been designed so that there is no thermal conduction along the length of the body, which prevents the risk of burns if touched.

• **SECURITHERM mixers with EP cartridge:** The body of certain Securitouch EP wall-mounted mechanical mixers is insulated from the hot water. It arrives at the cartridge inside narrow tubes without coming into contact with the brass walls of the mixer.

Thermal shock feature

• **SECURITHERM thermostatic point-of-use mixers:**

With SECURITHERM thermostatic mixers it is possible to undertake thermal shocks at the temperature of the hot water in the system:

- for refs H9741TP and H9768TP dual control models only, unscrew the temperature adjustment cap using an Allen key and turn the valve spindle clockwise all the way to the right to override the temperature setting.

- on all other dual control models simply press the little red button with a pointed tool to override the maximum temperature limiter.

- remove the control lever to unblock the temperature limiter on sequential models.

• **SECURITHERM mixers with EP cartridge:**

With certain mixers with an EP cartridge it is possible to undertake a thermal shock at the temperature of the Hot Water in the system without removing the control lever or shutting off the Cold Water supply. This feature is also standard on some models with a classic ceramic cartridge (see below).

Unlock the maximum temperature limiter to carry out a thermal shock: simply push in the red button with a pointed tool.

Thermal shock at system temperature.

DELABIE'S SOLUTIONS FOR EASE, COMFORT AND ERGONOMICS

High spout:
optimised hand washing

Sculptured control lever:
easy to grip

Ergonomic controls

Long lever

Discover our Ergonomics and
Accessibility solutions video

Domestic washbasin mixers and taps do not provide the necessary level of comfort for the residents of healthcare facilities and retirement homes. These domestic mixers/taps are designed for personal washing (for face washing or cleaning teeth etc.) and are not designed for washing the whole body.

• Unsuitable dimensions

Residents in healthcare facilities and retirement homes include the sick, weak, elderly or disabled people. The mixers and taps used for personal hygiene should be suitable for the resident's physical needs and the required use (washing at a hand basin requires greater comfort). To ensure optimised washing, mixers and taps should have an increased spout height and projection.

• Lack of ergonomics

The control knobs of conventional mixers and taps are not designed for easy gripping. Moreover, the movement required to adjust the flow rate and temperature is not always smooth. As a result, residents in healthcare facilities and retirement homes have to make an additional effort to operate the mixer or tap.

Comfortable and easy to use

• Specific, adapted dimensions: high and extended spout (projection)

The dimensions of mixers and taps destined for patient bathrooms must be suitable for their range of movements, and offer them all the ease and comfort they require. DELABIE offers mixers and taps with higher and longer spouts than traditional mixers and taps. This allows patients to optimise hand washing and personal washing. Moreover, an increased drop height reduces the risk of bacteria splashing back from the waste or drain onto the spout. This also allows the installation of terminal micro-filters.

• Ergonomic controls

DELABIE offers a wide choice of ergonomic control levers to meet the specific needs of different users:

Controls with manual contact:

- Sculptured levers or ergonomic control knobs for an easy grip.
- Solid levers combining design and ergonomics.

Controls with no manual contact:

- Hygiene levers: these long levers are specifically designed for healthcare professionals and patients with reduced mobility, and can be controlled with no manual contact using the wrist, forearm or elbow.
- Infrared presence detection: DELABIE's electronic mixers and taps do not require any effort from the patient. The mixer/tap opens and closes automatically when hands are presented in the detection zone (with no manual contact) for superior comfort.

Besides the convenience and comfort they provide for the residents, these mixers and taps - which operate without manual contact - help prevent the spread of germs by hand (perfect hygiene).

DELABIE'S SOLUTIONS FOR SAVING WATER AND ENERGY

Patients or residents tend to wash at a basin rather than take a shower as they have reduced autonomy (e.g. those weakened by illness, the elderly, semi-bedridden patients, those recovering from surgery, etc.). Washing at the washbasin takes longer (14 - 20 minutes) than showering (8 - 10 minutes on average) and involves a significant volume of water.

Average water consumption per person per day:

Domestic consumption:
137 litres per day per person

H Hospitals or similar:
300 - 450 litres per day per bed

♿ Retirement homes or care homes:
up to 250 litres per day per bed

Source: Information Centre for Water (CIEAU) Water Agency, Loire Brittany

DELABIE's mechanical mixers for washbasins: 45% water savings

Most mixer manufacturers regulate the flow rate inside the cartridge or at the mixer outlet. This inevitably creates counter pressure in the mixer, resulting in cross flow between the hot and cold water.

DELABIE's basin mixers with ceramic cartridges are fitted with a flow rate limiter at the hot and cold water inlets to achieve 5 lpm at the outlet. The water savings achieved are about 45% and user comfort is maintained. Controlling the flow rate at the inlet instead of the outlet prevents cross flow between hot and cold water, which causes the proliferation of bacteria upstream of the mixers.

WATER SAVINGS IN HEALTHCARE FACILITIES

The purchase cost of a DELABIE mixer can be covered by the water savings achieved

A comparison between a domestic mixer at 9 lpm, a DELABIE mixer at 5 lpm and a DELABIE electronic mixer at 4 lpm. The price per m³ of mixed water is £7 excl. VAT.

Water savings achieved in a 400 bed hospital (patient rooms)	Conventional mixers	DELABIE mixers	DELABIE electronic mixers
Number of beds	400	400	400
Points-of-use for hand washing	BASIN	BASIN	BASIN
Average length of flow/day/bed	20 min.	20 min.	7.5 min.
Number of days used/year	290	290	290
Mixer consumption in lpm	9	5	4
Annual consumption in m ³	20,880m ³	11,600m ³	3,480m ³
Annual consumption in £	£146,160	£81,200	£24,360
Annual consumption per mixer in £	£365	£203	£61
Annual saving excl. VAT		£64,960	£121,800

DELABIE's electronic mixers for washbasins: 85% water savings

Compared to conventional mixers, DELABIE's electronic controls can offer maximum water savings. They ensure the manager's water bills can be reduced whilst preserving user comfort.

Automatic shut-off and split delivery

The mixer or tap shuts off automatically when hands are removed from the detection zone. This removes the risk of waste through negligence. The flow time is reduced to the necessary minimum (wetting, rinsing).

Regulated flow rate

Some of DELABIE's electronic mixers and taps are regulated at 4 lpm. The majority of DELABIE's electronic mixers and taps are, however, regulated at 3 lpm. The flow rate remains constant regardless of pressure variations in the system.

CONTROLLING WATERBORNE HEALTH RISKS

Water, essential for hygiene, can also be a source of infection if its quality is not controlled. The proliferation of bacteria (*Legionella spp.*, *Pseudomonas aeruginosa*, etc.) in the water supply or in mixers and taps may cause serious infections, especially for vulnerable people.

Water systems in all buildings open to the public should be monitored for *Legionella* (e.g. hotels and holiday accommodation, campsites, detention centres, etc.) and not just healthcare facilities. The HSE Approved Code of Practice and Guidance (ACOP) document L8 states that duty holders should identify and assess sources of risk of exposure to *Legionella*; put in place precautions to prevent or control that risk; and monitor these measures to ensure that they remain effective. This applies in all circumstances where the Health and Safety at Work Act 1974 applies.

The prevention of health risks associated with pathogenic bacteria in water systems should be a constant concern for public buildings, and in particular Healthcare Facilities (see the current guidance opposite).

The BIOFIL range of point-of-use filters provides a preventative or curative solution to secure the water quality at the point-of-use and protect the health of the user.

CURRENT GUIDANCE

HSE guidance HSG274 Part 2 (2014) and DHSC Health Technical Memorandum (HTM) 04-01 Part B (2016) provide guidance for the control of *Legionella* in hot and cold water systems and on providing safe water in healthcare premises respectively

Point-of-use filters prevent the discharge of planktonic *Legionella* from the tap and shower outlets and may be used to provide water free of *P. aeruginosa*. They should be used primarily as a temporary measure until a permanent, safe engineering solution is developed, although long-term use of such filters may be needed in some healthcare situations. They may also be considered where a high level of disinfection of water systems may dislodge biofilm. **Point-of-use micro-filters with a 0.2µm membrane constitute a means for removing *Legionella* and *Pseudomonas aeruginosa* in water drawn off from the system.**

HTM 04-01 Part C (2016) provides advice on managing *Pseudomonas aeruginosa* in augmented care units

For direct contact with augmented care patients, water of a known satisfactory quality should be used, that is, either: water where testing has shown absence of *P. aeruginosa*; or water supplied through a POU filter; or sterile water (for example, for skin contact for babies in neonatal intensive care units).

HSG274 Part 2 states that monitoring for *Legionella* should be carried out:

- when water is treated with biocides and when distribution temperatures are reduced from HSE guidelines.
- where water treatment regime control levels are not being consistently achieved.
- where there is a high-risk of contamination e.g. hospitals and care homes.
- where an outbreak of legionellosis has been identified.

When a sample identifies a *Legionella* count above 100 CFU/Litre (Colony Forming Unit) an immediate review of the control measures and risk assessment should be carried out to identify any remedial action required. Disinfection of the system should also be considered.

Point-of-use micro-filters are a means to restore the bacteriological quality of water at the point-of-use (anti-*Legionella* and all-germ tap filters and shower heads, etc.).

ANTI-LEGIONELLA AND ALL-GERM RANGE OF BIOFIL FILTERS

DELABIE offers a collection of BIOFIL water filtering devices: tap or wall-mounted shower filters, shower head filters and spout filters

BIOFIL filters are designed to deliver **bacteriologically controlled water** at the point-of-use.

These devices retain bacteria, including waterborne opportunistic pathogenic microorganisms such as *Legionella spp.*, *Legionella pneumophila*, *Pseudomonas aeruginosa*, non-tuberculous Mycobacteria and other microorganisms, thanks to a hollow fibre microfiltration membrane with a porosity of 0.1µm nominal-rated. This microfiltration technology guarantees a bacteriological quality superior to that of the drinking water system without changing its chemical composition.

BIOFIL filters are designed to **secure water delivery at the point-of-use**.

They are recommended for **managing and preventing** so-called **healthcare associated infections (HAIs)**.

AREAS OF USE

Anti-Legionella and all-germ filters

BIOFIL 2, 3 & 4-month point-of-use filters provide a physical barrier to reduce the risk of infection associated with waterborne microorganisms. The microfiltration membrane provides protection for immunosuppressed and vulnerable people.

Filters are necessary for the care of **immunosuppressed patients** in high risk areas such as bone marrow and organ transplant units, oncology, intensive care, neonatal wards and any other area providing care for this type of patient. They also provide **protection against the risk of Legionella** and ensure compliance with regulations for users of public buildings.

TOTAL CONTROL OF THE MANUFACTURING PROCESS

100% quality controlled

The fibre quality and porosity of the finished product are continuously monitored during the manufacturing process for 100% of the fibres.

COMPONENT DISPOSAL STRATEGY

BIOFIL filters are classified as household waste. The outer packaging is made from recycled cardboard which is also fully recyclable.

HOLLOW FIBRE, AN INNOVATIVE, TECHNICAL SOLUTION

Hollow fibre microfiltration

There are two main types of membrane used in point-of-use microfiltration devices: flat membrane or hollow fibre membrane.

DELABIE chose to use the **hollow fibre membrane filtration technology**.

THE PRINCIPLE OF HOLLOW FIBRE FILTRATION

Hollow fibre filter

The BIOFIL filter is made up of a collection of polyethylene hollow fibres grouped together into a unit. The fibres are extremely fine and flexible, with an outer diameter of 0.6mm and a thickness of several tens of microns.

The fibres are hollow and shaped like a straw (tubular).

Microporous structure

The hollow fibre membranes have multiple pores which vary in size from 0.01 - 0.1 micron. Each membrane consists of several surfaces with microporous structures (micro slits).

Bacteria and any particles in suspension that are larger than 0.1 micron are trapped by these structures and are retained permanently on the external surface of the membrane.

External/Internal frontal filtration

DELABIE uses a frontal filtration system. The water requiring treatment flows at right angles to the filter surface and passes through the membrane due to the pressure difference on either side of the membrane.

The water flows from the external to the internal surface of the fibre.

Bacteria and other microparticles that cannot pass through the gaps in the membrane structure are retained on the outer surface and therefore do not penetrate the membrane.

Filtration area/storage of bacteria

The filter's large hollow-fibre filtration surface area makes it possible to filter a larger volume of water.

Consequently the storage capacity for bacteria and impurities trapped inside the filter is much greater.

BACTERIAL CHALLENGE

BIOFIL filters are approved using the ASTM F838* method.

This test confirms the effective bacterial retention power of the filters used for the decontamination of liquids.

The microbiological challenges carried out on BIOFIL filters in laboratories using the species *Brevundimonas diminuta*, *Legionella pneumophila* and *Pseudomonas aeruginosa* demonstrate a retention efficiency of 7 log for all waterborne microorganisms which are larger than the filter pores which have a nominal porosity rating of 0.1µm and absolute porosity rating of 0.2µm.

When subjected to this test, all BIOFIL filters delivered an effluent free from bacteria, so they have a sterilising grade of 0.1 micron nominal-rated.

* Standard Test Method for Determining Retention of Membrane Filters Utilized for Liquid Filtration.

LIFESPAN

BIOFIL anti-Legionella and all-germ filters can be used for up to 4 months after initial installation (depending on the model installed).

After the time period marked on the filter (2, 3 or 4 months), DELABIE recommends changing the filter to avoid any risk of retro-contamination from the bacteria concentrated in the filter especially in at-risk areas.

Note: The amount of impurities in the water will vary between water systems. Filters will, therefore, become clogged at different rates.

If the filter becomes clogged prematurely, it is necessary to change it. We recommend pre-filtration upstream to filter out suspended solids and/or colloids, etc.

Bacterial proliferation is significantly reduced in an installation where the water is pre-filtered, and the lifespan of all equipment is greatly increased.

RESISTANT TO DIFFERENT WATER SYSTEM TREATMENTS

BIOFIL filters will withstand thermal and chemical shocks. During chemical or thermal shocks, impurities become trapped in the filter and reduce its lifespan. DELABIE, therefore, recommends **changing the filter after any treatment**.

Resistance to thermal shocks:

Temperatures of 70°C for a cumulative period of 30 minutes during its lifetime.

Resistance to chemical shocks:

Chlorine levels for 2-month filters: 2 hours at 100ppm;
3-month filters: 3 hours at 100ppm;
and 4-month filters: 4 hours at 100ppm.

OPTIMISED TRACEABILITY

To control the health risks associated with water, the whole process from the manufacture of the medical device components to the use of the finished product must be completely traceable.

Individual packet label

All BIOFIL filters have a unique batch number which can be easily traced back through the production process.

Double labelling on the filter

All filters are supplied with 2 waterproof labels which identify the product and ensure traceability when the filter is changed.

One is positioned on the product, the other can be removed and transferred to the record log, ensuring traceability.

COMPLIANCE

CE marked class 1 medical devices

BIOFIL non-sterile filters comply with the European Regulation UE 2017/745 and benefit from the CE Mark (2021).

Sterilisation complies with European standard EN ISO 11137

After manufacture, BIOFIL filters are sterilised using gamma rays. Each box has a **visual marker showing that the filters have been sterilised**.

After sterilisation, BIOFIL filters have a shelf life of 3 years. The product expiry date is marked on the label.

Certificate of sanitary compliance

All BIOFIL filters conform to the CPDW directive and the Order of 29 May 1997, as amended, and the French Ministry of Health Circular DGS/SD7A2002 no. 571 of 25 November 2002.

WRAS

Our BIOFIL filters are WRAS approved. WRAS Approval demonstrates that a product complies with the Water Supply (Water Fittings) Regulations and Scottish Water Byelaws. The WRAS approval standard is accepted as a quality benchmark by water suppliers who enforce the Water Regulations and Byelaws.

 : Water flow through the filter

BIOFIL tap or wall-mounted shower filter

Anti-Legionella and all-germ filter

- Single use filter for taps or wall-mounted showers, sterilising grade **0.1µm nominal-rated**.
 - Hydrophilic polyethylene hollow fibres.
 - Maximum lifespan: **2, 3 or 4 months** after installation depending on the model installed.
 - **Space saving**, suitable for mixers and taps with a low drop height.
 - Filtration area: 1,400cm² for 2-month versions; 2,200cm² for 3-month versions; and 3,200cm² for 4-month versions.
 - Filtration flow rate: 5.5 lpm* at 3 bar for 2-month versions; 7.6 lpm* at 3 bar for 3 and 4-month versions (filter only, excludes any flow rate restrictor/regulator in the shower or mixer).
 - Maximum upstream pressure at point-of-use: 5 bar.
 - Careful management of retro-contamination: **protective skirt** and filter position is optimised thanks to a **tilted connector**.
 - Compatible with and resistant to chemical and thermal shocks.
 - **CE marked class I Medical Device** for non-sterile versions.
 - **Available in two versions:**
 - **sterile filters**, individually wrapped in sterile packaging.
 - **non-sterile filters**, individually wrapped.
- * Average flow rate during the product lifespan.

Tilted connector to optimise filter position:
Filter position can be adjusted to prevent the water flowing directly onto the waste. Reduces the risk of retro-contamination.

BIOSAFE: INFECTION CONTROL

Opens/closes automatically, with no manual contact

DELABIE's electronic mixers and taps are operated by active infrared detection. Flow opens when the detector senses hands and shuts off automatically when hands are removed from the detection zone. **No manual contact prevents the spread of germs by hand.**

Reduced-stagnation solenoid valve

No manual contact

Anti-bacterial duty flush programme

If a mixer or tap is not used for prolonged periods of time, water stagnates in the pipework, which favours the development of bacteria (e.g. isolated points-of-use, unoccupied rooms, etc.). DELABIE's electronic mixers and taps have a duty flush programme. **An automatic flush takes place for approximately 60 seconds every 24 hours after the last use** (programmable on some models).

Reduced-stagnation solenoid valve

Most solenoid valves are fitted with a rubber membrane behind which water stagnates and is not renewed. This can lead to bacterial proliferation. DELABIE has developed a technology without a membrane (patented system). With this **piston-operated solenoid valve**, water is drained and renewed with every use **which reduces niches where bacteria can develop.** The solenoid valve's self-cleaning system with a calibrated groove reduces the build-up of dirt. Furthermore, its slow closure eliminates water-hammer.

Energy savings

The electronic mixers and taps do not require much energy to operate. DELABIE has chosen infrared active pulse technology, **a low-power consumption solution.**

The infrared beam is emitted intermittently, saving energy while ensuring effective detection. Battery-operated models have an average lifespan of **350,000 cycles** (i.e. 3 to 6 years) depending on the frequency of use. The Lithium batteries are widely available, affordable and recyclable. The significant **hot water savings** provided by DELABIE's mixers and taps also result in energy savings.

Environmental labels

The water and energy saving performance of DELABIE's electronic mixers and taps means that the buildings achieve the highest performance standards for international rating schemes such as LEED, BREEAM or HQE.

For more information see page 215.

SPECIFICALLY DESIGNED

Easy to install

DELABIE's products are **easy to install and adjustments are kept to a minimum** in order to save time during installation.

- **Independent electronic control unit: BINOPTIC, TEMPOMATIC 2:**

Depending on the model, there is an option to adjust the presence detection distance, to change the operating mode (ON/OFF or automatic) and change the duty flush settings. The battery-operated models work autonomously for 3 to 6 years. The electronic control units are waterproof (IP65) with diagnostic LEDs to facilitate servicing.

- **Electronic unit and solenoid valve integrated in the body of the mixer/tap*: TEMPOMATIC 4**
Can be installed on any isolated point-of-use, for new builds as well as renovation.

- **6V Lithium batteries*:**

There are no electrical connections required. Simply connect the flexibles to the supply pipes in the same way as for a conventional mixer/tap. No special adjustment is necessary; the mixer/tap is ready to operate independently for 3 to 6 years. A red LED will flash for 15 days to indicate that the battery life is low. The batteries can be changed without shutting off the water supply or removing the mixer/tap.

- **230/6V mains supply (plug in or recessed)*:**

To operate, simply connect the flexibles to the supply pipes and connect the electrical supply to the mixer/tap via a plug and socket or recessed connection close to the basin. This does not require any specific maintenance (no battery changes).

* Depending on model

85% WATER AND ENERGY SAVINGS

Water savings

Compared to conventional mixers and taps, DELABIE's electronic mixers and taps can offer maximum water savings. They ensure the manager's water bills can be reduced whilst preserving user comfort.

- **Automatic shut-off and split delivery**

The mixer or tap shuts off automatically when hands are removed from the detection zone.

This removes the risk of waste through negligence. The anti-blocking security activates to prevent the mixer or tap from flowing continuously. The flow time is reduced to the necessary minimum (wetting, rinsing).

- **Regulated flow rate**

Some of DELABIE's electronic mixers and taps are regulated at 4 lpm. The other electronic mixers & taps are, however, regulated at 3 lpm.

The flow rate remains constant regardless of pressure variations in the system. The flow rate can be adjusted from 1.4 lpm (see *Environmental labels*) to 6 lpm.

TEMPOMATIC MIX

Electronic mains or battery-operated mixer with swivelling spout

- Independent IP65 electronic control unit.
- 230/12V mains supply with transformer or CR123 6V Lithium batteries.
- BIOCLIP models supplied with 2 removable stainless steel spouts L. 183mm.
- Body and spout with smooth interiors (reduces bacterial development).
- Adjustable duty flush (pre-set flush ~60 seconds every 24 hours after last use).
- Flow rate limited to 5 lpm at 3 bar.
- Shock-resistant infrared presence detection sensor.
- Chrome-plated brass body with fixing reinforced by 2 stainless steel rods.
- Hygiene lever L. 100mm controls temperature.
- PEX flexibles with filters and solenoid valves M $\frac{3}{8}$ ".
- Anti-blocking security.
- Solenoid valves are upstream of the mixing chamber.
- Suitable for people with reduced mobility.
- 10-year warranty.

Two shut-off options on mains supply models:

Standard mode: timed flow with automatic shut-off.

ON/OFF mode: user shuts off flow voluntarily or automatic shut-off after 30 minutes of flow.

Thermal shocks are possible.

Pro tip: in ON/OFF mode position the sensor on the side of the mixer.

Quick and easy to install:

- 1 Turn the stainless steel spout through 90° clockwise then pull it towards you to remove it.
- 2 Put another spout in its place.

20870T1

BINOPTIC

Electronic mixer and tap, mains supply or battery-operated

- Independent IP65 electronic control unit.
- 230/12V mains supply with transformer or CR123 6V Lithium batteries.
- Scale-resistant flow straightener.
- Spout with smooth interior and low water volume (reduces bacterial development).
- Adjustable duty flush (pre-set flush ~60 seconds every 24 hours after last use).
- Flow rate pre-set at 3 lpm at 3 bar, can be adjusted from 1.4 - 6 lpm.
- Active, infrared presence detection, sensor at the end of the spout optimises detection.
- Chrome-plated brass body.
- PEX flexibles with filters and solenoid valves Ø 15mm for compression fittings.
- Fixing reinforced by 2 stainless steel rods.
- Anti-blocking security.
- Side temperature control with adjustable maximum temperature limiter on mixers.
- Suitable for people with reduced mobility.
- 10-year warranty.

TEMPOMATIC 5

Electronic mixer and tap, mains supply or battery-operated

- 230/6V mains supply or CR123 6V Lithium batteries.
- Reduced-stagnation solenoid valve and electronic unit integrated into the body of the mixer/tap.
- Scale-resistant flow straightener.
- Duty flush (~60 seconds every 24 hours after last use).
- Flow rate pre-set at 3 lpm at 3 bar, can be adjusted from 1.4 - 6 lpm.
- Active, infrared presence detection, sensor at the end of the spout optimises detection.
- Chrome-plated metal body.
- PEX flexibles Ø 15mm for compression fittings with stopcocks, filters and non-return valves.
- Fixing reinforced by 2 stainless steel rods.
- Anti-blocking security.
- Side temperature control with adjustable maximum temperature limiter on mixers.
- Suitable for people with reduced mobility.
- 10-year warranty.

ANTI-SCALDING SAFETY

Maximum temperature limiter

All DELABIE's mixers are supplied with a **pre-set maximum temperature limiter**. The user cannot increase the temperature above the maximum set temperature, reducing the risk of scalding.

Automatic anti-scalding failsafe

• **SECURITHERM thermostatic technology** ensures immediate hot water (HW) shut-off if the cold water (CW) supply fails. If the CW supply fails, the European standard EN 1111 allows a slight leak of HW (0.10L/10 seconds).

With DELABIE's thermostatic mixers **the HW shut-off is complete** (with no trickle of water).

If the HW supply fails, DELABIE's SECURITHERM mixers also shut off the CW supply.

• **SECURITHERM pressure-balancing technology**, known as EP, ensures instant and automatic safety. **If the CW supply fails, the HW flow rate is reduced, removing the risk of scalding for the user.**

If the HW supply fails, the CW flow rate is likewise reduced.

Securitouch technology

Securitouch technology provides increased safety for superior comfort.

The whole mechanism on certain models is insulated, preventing any risk of burns when touching the mixer.

For more information see page 11.

COMFORT

Temperature stability

• **SECURITHERM thermostatic mixers** ensure stable temperatures regardless of pressure and flow rate variations in the system. They respond immediately to any changes.

• **SECURITHERM EP mixers** compensate for the variations in CW and HW pressure at the inlets. They ensure that the water temperature at the outlet remains stable for the user, removing the risk of scalding. *For more information see page 10.*

• **DELABIE's mechanical mixers** are fitted with an exclusive solution which effectively reduces temperature variations if there are pressure variations in the system.

However, these mechanical mixers do not have the precision of thermostatic or EP mixers and they are not fitted with automatic anti-scalding safety. They provide an intermediate economic solution.

Reduced risk of Hot Water/Cold Water cross flow

On the new generation of DELABIE's mechanical mixers, **the HW can only flow back into the CW supply (or vice versa) if the pressure differential between the inlets is greater than 1 bar.**

Therefore, the risk of cross flow between the HW and CW is very small, unlike other mixers. As a result, the risk of bacterial proliferation is reduced. Moreover, **this solution removes the need for non-return valves to be installed.**

BIOSAFE: INFECTION CONTROL

BIOCLIP removable mixers for cleaning/disinfection

Since they are in contact with water, the internal surfaces of mixers and taps are exposed to bacterial proliferation.

The mixers in the BIOCLIP range provide simple solutions to fight against the spread of germs inside and on the outside of mixers and taps, and against the spread of infectious bacteria by hand.

They allow **the interior to be cleaned completely - the only way to remove biofilm effectively - and an easy way to disinfect the mixer, for preventative or curative reasons**, to fight against bacterial development effectively.

Body with smooth interior

Most mixers and taps have bodies and spouts with rough interiors. As a result, they provide niches where bacteria can adhere.

All the internal parts of the body, including the spout, of DELABIE's mixers & taps for basins are completely smooth, reducing biofilm attachment and making it easier to treat.

For more information see page 8.

Low volume of standing water in the body

The majority of DELABIE's mixers have been specifically **designed to reduce the volume of standing water in the body** and thus significantly reduce the risk of bacterial development. In effect, water flows from the inlets to the cartridge via narrow tubes which can only hold a limited volume of water. The risk of bacterial proliferation is reduced.

WATER AND ENERGY SAVINGS

The majority of DELABIE's basin mixers are fitted with flow rate limiters set at 4 or 5 lpm at 3 bar. They offer significant water and energy savings while guaranteeing optimal comfort for the user.

Maximum temperature limiter is engaged

Temperature stability

Body with smooth interior

BIOSAFE spout outlet

SEQUENTIAL MIXERS: TECHNOLOGY AND FUNCTIONALITY AT THE SERVICE OF HEALTHCARE FACILITIES

Sequential control to open/close

Improved ergonomics and functionality

The new generation of DELABIE's thermostatic mixers is sequential: the same lateral movement, over a 180° range, opens the water flow and adjusts the temperature.

Opens and closes with cold water

SECURITHERM sequential mixers open and close with cold water for increased anti-scalding safety.

Cold water

Opening with cold water, without any passage of hot water, ensures the supply of only cold water if required (exclusive to DELABIE).

Automatic anti-scalding failsafe

SECURITHERM thermostatic technology ensures immediate hot water shut-off if the cold water supply fails. If the cold water supply fails, the European standard EN 1111 allows a slight leak of hot water (0.10L/10 seconds).

With DELABIE's thermostatic mixers **the hot water shut-off is complete** (with no trickle of water). If the hot water supply fails, DELABIE's SECURITHERM mixers also shut off the cold water supply.

Thermal shock feature

With SECURITHERM sequential thermostatic mixers it is possible to **undertake thermal shocks at the temperature of the hot water in the system**. Simply remove the control lever to override the temperature limiter.

Comfort and ergonomics

SECURITHERM sequential thermostatic mixers ensure **stable temperatures regardless of pressure and flow rate variations in the system**. They respond immediately to any changes.

Ergonomic controls

are easy to operate, and are suitable for hospital patients, the elderly or disabled people.

Removable mixer

Sequential: opens and closes with cold water

BIOSAFE: infection control HW/CW cross flow is impossible

DELABIE has developed a unique system that enables **sequential thermostatic mixers to shut off the Hot Water and Cold Water directly at the inlets**, making non-return valves completely redundant.

Cross flow between the HW and CW is impossible. This reduces the risk of bacterial proliferation considerably. *For more information see page 9.*

Body with smooth interior

Low volume of standing water in the body

Sequential thermostatic mixers have just one mechanism instead of two like dual control models. As a result, **fewer components are in contact with the water** and there is less standing water in the mixer. The risk of bacterial development is reduced.

SECURITHERM BIOCLIP mixer H. 95mm

Removable sequential thermostatic mixer, smooth interior

- **Sequential:** opens and closes with cold water (see page 36).
- **No risk of cross flow between hot and cold water.**
No non-return valves on the inlets.
- **Can be removed entirely** for cleaning/disinfection (see page 8).
- **Anti-scalding failsafe:** immediate shut-off if cold or hot water supply fails.
- **Securitouch thermal insulation prevents burns.**
- Spout H. 95mm L. 120mm with hygienic flow straightener.
- Scale-resistant **sequential thermostatic cartridge.**
- Temperature control: cold water up to 40°C.
- Temperature limiter set at 40°C.
- Thermal or chemical shocks are possible.
- **Body and spout with smooth interiors and low water volume** (reduces bacterial development).
- Flow rate limited to 5 lpm at 3 bar.
- No manual contact thanks to Hygiene control lever.
- Stopcocks in chrome-plated brass.
- Fixing reinforced by 2 stainless steel rods.
- Suitable for people with reduced mobility.
- 10-year warranty.

Short lever

26216EP: MULTIPLE DEMANDS, A UNIQUE CONCEPT

The mixer that meets all the patients' needs

As with all SECURITHERM EP mixers, the 26216EP mixer is fitted with a **maximum temperature limiter**, with **automatic anti-scalding safety**, and it also has the following specific advantages:

Pressure-balancing

The 26216EP mixer is fitted with a pressure-balancing cartridge.

This technology **compensates for the unavoidable variations in pressure in the system** (draw off at other outlets in the system, etc.), ensuring that the water temperature at the outlet remains stable.

The EP cartridge also removes the need for pressure regulators upstream of the mixer, which are complex and have large cavities and several membranes which provide additional niches where microbes can develop.

Securitouch technology

The body and mechanism of the 26216EP mixer have thermal insulation. Hot water flows from the inlets to the cartridge inside flexibles or copper tails then to the mechanism. This internal design ensures the **absence of hot spots**.

Thermal shock feature

The 26216EP is **one of the only mechanical mixers on the market allowing thermal shocks at the temperature of the Hot Water in the system without removing the control lever or shutting off the Cold Water supply**. To override the temperature limiter, simply press the little red button behind the control lever. *For more information see page 11.*

Modern design

The **sleek lines** of this mixer with **no spout** create a contemporary design without neglecting user comfort. The simple shape of the mixer reduces the build-up of dirt and facilitates cleaning, the fundamentals of hygiene.

BIOSAFE: infection control

Very low water volume in the body

This mixer has been specifically designed to reduce the volume of standing water in the body to a minimum.

Comparison of standing water volumes in mixer bodies:

Conventional mixer	26216EP mixer
	
	Water volume is significantly reduced

Smaller water passages and the absence of a spout mean that the volume of water in the body of the 26216EP mixer is significantly reduced so bacterial proliferation is also reduced.

BIOSAFE outlet integrated into the mixer body

The BIOSAFE outlet is integrated directly into the mixer body. This design, with no spout, eliminates the area that is highly susceptible to bacterial development.

This BIOSAFE outlet is made from Hostaform®, its smooth internal surface provides **nowhere for impurities or scale to adhere**, reducing the emergence and spread of bacteria and germs in damp conditions.

For more information see pages 98 - 99.

No contact with chrome, nickel or lead

The internal design of the 26216EP mixer prevents the water from coming into contact with chrome, nickel or lead. Therefore, the water delivered is safer and purer.

Water and energy savings

Fitted with flow rate limiters at 5 lpm at 3 bar, mixers from the 26216EP BIOSAFE range enable water consumption to be considerably reduced whilst still ensuring optimal user comfort.

For more information see page 13.

2664T1

BIOCLIP mixer H. 180mm with swivelling spout

Mechanical mixer with removable spout and pressure-balancing or ceramic cartridge

- High, removable stainless steel swivelling spout H. 180mm.
- Ø 35mm standard ceramic or **pressure-balancing cartridge**.
- Pre-set maximum temperature limiter.
- **Body and spout with smooth interiors** (reduces bacterial development).
- **Thermal shocks are easy to undertake** without removing the control lever or shutting off the CW supply (see page 11).
- Flow rate regulated at 5 lpm.
- No manual contact thanks to Hygiene control lever L. 185mm.
- PEX flexibles F $\frac{3}{8}$ ".
- Fixing reinforced by 2 stainless steel rods.
- Suitable for people with reduced mobility.
- 10-year warranty.

On EP pressure-balancing versions:

- **Anti-scalding safety:** HW flow rate is reduced if CW supply fails.
- Stable temperature regardless of pressure and flow rate variations.
- Filters and non-return valves.

Quick and easy to install:

- 1 Turn the stainless steel spout through 90° clockwise then pull it towards you to remove it.
- 2 Put another spout in its place.

TEMPOMATIC MIX

Electronic mains or battery-operated mixer with swivelling spout

- Independent IP65 electronic control unit.
- 230/12V mains supply with transformer or CR123 6V Lithium batteries.
- BIOCLIP models supplied with 2 removable stainless steel spouts L. 185mm.
- Body and spout with smooth interiors (reduces bacterial development).
- Adjustable duty flush (pre-set flush ~60 seconds every 24 hours after last use).
- Flow rate limited to 9 lpm at 3 bar.
- Shock-resistant infrared presence detection sensor.
- Chrome-plated brass body with fixing reinforced by 2 stainless steel rods.
- Hygiene lever L. 100mm controls temperature.
- PEX flexibles with filters and solenoid valves M $\frac{3}{8}$ ".
- Anti-blocking security.
- Solenoid valves are upstream of the mixing chamber.
- Suitable for people with reduced mobility.
- 10-year warranty.

Two shut-off options on mains supply models:**Standard mode:** timed flow with automatic shut-off.**ON/OFF mode:** user shuts off flow voluntarily or automatic shut-off after 30 minutes of flow.

Thermal shocks are possible.

Pro tip: in ON/OFF mode position the sensor on the side of the mixer.**TEMPOMATIC MIX mixer with swivelling spout****Mains supply**

BIOCLIP, H. 300mm L. 185mm	20870T3	£696.22

-------------------	----------------	----------------

Options: wastes (see page 103), BIOFIL tap filters (see page 21), stainless steel spouts or BIOFIL spout filters (see page 68)

20870T3

**Quick and easy to install:**

- 1 Turn the stainless steel spout through 90° clockwise then pull it towards you to remove it.
- 2 Put another spout in its place.

TEMPOMATIC PRO

Electronic mixer and tap, mains supply or battery-operated

- Independent IP65 electronic control unit.
- 230/12V mains supply with transformer or CR123 6V Lithium batteries.
- Scale-resistant flow straightener suitable for fitting a BIOFIL point-of-use filter (see page 21).
- 360° swivelling spout with smooth interior (reduces bacterial development).
- Removable spout for cleaning/disinfection.
- Adjustable duty flush (pre-set flush ~60 seconds every 24 hours after last use).
- Flow rate pre-set at 4 lpm at 3 bar, can be adjusted from 1.4 - 6 lpm.
- Shock-resistant infrared presence detection sensor.
- Chrome-plated brass body with fixing reinforced by 2 stainless steel rods.
- PEX flexibles with filters and solenoid valves Ø 15mm for compression fittings.
- Anti-blocking security.
- Suitable for people with reduced mobility.
- 10-year warranty.

Long lever

On mixers:

- Side temperature control with adjustable maximum temperature limiter and long ergonomic lever.
- Solenoid valves are upstream of the mixing chamber.

Two shut-off options on mains supply models:

Standard mode: timed flow with automatic shut-off.

ON/OFF mode: user shuts off flow voluntarily or automatic shut-off after 30 minutes of flow.

Thermal shocks are possible.

BINOPTIC

Electronic mixer and tap, mains supply or battery-operated

- Independent IP65 electronic control unit.
- 230/12V mains supply with transformer or CR123 6V Lithium batteries.
- Scale-resistant flow straightener.
- Spout with smooth interior and low water volume (reduces bacterial development).
- Adjustable duty flush (pre-set flush ~60 seconds every 24 hours after last use).
- Flow rate pre-set at 3 lpm at 3 bar, can be adjusted from 1.4 - 6 lpm.
- Active, infrared presence detection, sensor at the end of the spout optimises detection.
- Chrome-plated brass body.
- PEX flexibles with filters and solenoid valves Ø 15mm for compression fittings.
- Fixing reinforced by 2 stainless steel rods.
- Anti-blocking security.
- Side temperature control with adjustable maximum temperature limiter and long lever on mixers.
- Suitable for people with reduced mobility.
- 10-year warranty.

Long lever

Two drop heights available depending on the choice of sink:

H. 170mm for semi-recessed sinks.

H. 250mm for countertop sinks.

ANTI-SCALDING SAFETY

Maximum temperature limiter

All DELABIE's mixers are supplied with a **pre-set maximum temperature limiter**. The user cannot increase the temperature above the maximum set temperature, reducing the risk of scalding.

Automatic anti-scalding failsafe

• **SECURITHERM thermostatic technology** ensures immediate hot water (HW) shut-off if the cold water (CW) supply fails. If the CW supply fails, the European standard EN 1111 allows a slight leak of HW (0.10L/10 seconds).

With DELABIE's thermostatic mixers **the HW shut-off is complete** (with no trickle of water).

If the HW supply fails, DELABIE's SECURITHERM mixers also shut off the CW supply.

• **SECURITHERM pressure-balancing technology**, known as EP, ensures instant and automatic safety. **If the CW supply fails, the HW flow rate is reduced, removing the risk of scalding for the user.**

If the HW supply fails, the CW flow rate is likewise reduced.

Maximum temperature limiter is engaged

Body with smooth interior

BIOSAFE: INFECTION CONTROL

BIOCLIP removable mixers for cleaning/disinfection

Since they are in contact with water, the internal surfaces of mixers and taps are exposed to bacterial proliferation.

The mixers in the BIOCLIP range provide simple solutions to fight against the spread of germs inside and on the outside of mixers and taps, and against the spread of infectious bacteria by hand.

They allow **the interior to be cleaned completely - the only way to remove biofilm effectively - and an easy way to disinfect the mixer, for preventative or curative reasons**, to fight against bacterial development effectively.

For more information see page 8.

Body with smooth interior

Most mixers and taps have bodies and spouts with rough interiors. As a result, they provide niches where bacteria can adhere.

All the internal parts of the body, including the spout, of DELABIE's mixers & taps for sinks are completely smooth, reducing biofilm attachment and making it easier to treat.

For more information see page 8.

Specifically designed spout heights

- A high spout reduces the risk of retro-contamination by bacteria.

- Deck-mounted mixers with high spouts are suitable for fitting all-germ point-of-use filters.

Ergonomic controls

COMFORT

Temperature stability

• **SECURITHERM thermostatic mixers** ensure stable temperatures regardless of pressure and flow rate variations in the system. They respond immediately to any changes.

• **SECURITHERM EP mixers** compensate for the variations in CW and HW pressure at the inlets. They ensure that the water temperature at the outlet remains stable for the user, removing the risk of scalding. *For more information see page 10.*

• **DELABIE's mechanical mixers** are fitted with an exclusive solution which effectively reduces temperature variations if there are pressure variations in the system.

However, these mechanical mixers do not have the precision of thermostatic or EP mixers and they are not fitted with automatic anti-scalding safety.

They provide an intermediate economic solution.

Reduced risk of Hot Water/Cold Water cross flow

On the new generation of DELABIE's mechanical mixers, **the HW can only flow back into the CW supply (or vice versa) if the pressure differential between the inlets is greater than 1 bar.**

Therefore, the risk of cross flow between the HW and CW is very small, unlike other mixers.

As a result, the risk of bacterial proliferation is reduced.

Moreover, **this solution removes the need for non-return valves to be installed.**

Optimised hand washing and personal washing

thanks to a large drop height and increased spout length.

Ergonomic controls

DELABIE offers a wide choice of ergonomic control levers - Hygiene, sculptured or solid levers - to meet the needs of different users. Hygiene levers are specifically designed for healthcare professionals and patients with reduced mobility, and can be controlled with no manual contact using the wrist, forearm or elbow.

AND ALSO...

Robust

- Body, base and spout made from chrome-plated brass.

- Fixing reinforced by 2 stainless steel rods with back-nuts for deck-mounted models: easy to install and reduces vandalism.

10-year warranty against any manufacturing defects.

SECURITHERM mixer H. 160mm

Sequential thermostatic mixer, smooth interior

- **Sequential:** opens and closes with cold water (see page 36).
- **No risk of cross flow between hot and cold water.**
No non-return valves on the inlets.
- BIOCLIP models: **can be removed entirely** for cleaning/disinfection (see page 8).
- **Anti-scalding failsafe:** immediate shut-off if cold or hot water supply fails.
- **Securitouch thermal insulation prevents burns.**
- Spout H. 160mm L. 140mm with hygienic flow straightener.
- Scale-resistant **sequential thermostatic cartridge.**
- Temperature control: cold water up to 40°C.
- Temperature limiter set at 40°C.
- Thermal or chemical shocks are possible.
- **Body and spout with smooth interiors and low water volume** (reduces bacterial development).
- Flow rate regulated at 9 lpm.
- No manual contact thanks to Hygiene control lever L. 146mm.
- Stopcocks in chrome-plated brass.
- Fixing reinforced by 2 stainless steel rods.
- Suitable for people with reduced mobility.
- 10-year warranty.

- PEX flexibles F $\frac{3}{8}$ ".
- Fixing reinforced by 2 stainless steel rods.
- Suitable for people with reduced mobility.
- 10-year warranty.

Mechanical mixer with standard ceramic cartridge H. 220mm L. 200mm	2506T2	£245.34
---	--------	---------

Options: wastes (see page 103), BIOFIL tap filters (see page 21), copper tails (see page 105)

2506T2

Mixer H. 145mm

Mechanical mixer with ceramic cartridge, smooth interior

- **Swivelling spout** H. 145mm L. 215mm with hygienic flow straightener.
- Ø 40mm ceramic cartridge.
- Pre-set maximum temperature limiter.
- **Body and spout with smooth interiors** (reduces bacterial development).
- Flow rate limited to 9 lpm at 3 bar.
- PEX flexibles F $\frac{3}{8}$ ".
- Fixing reinforced by 2 stainless steel rods.
- Suitable for people with reduced mobility.
- 10-year warranty.

CARTRIDGE AND BODY WITH LOW WATER VOLUME
Infection control

HAND SPRAY WITH 2 JET OPTIONS
Comfort

TRANSPARENT POLYURETHANE FLEXIBLE WITH SMOOTH INTERIOR & EXTERIOR
Infection control
Low water volume

SECURITHERM mixer with retracting hand spray H. 105mm

Sequential thermostatic mixer with swivelling outlet

- Suitable for baby baths.
- **Sequential:** opens and closes with cold water (see page 36).
- **No risk of cross flow between the hot and cold water.**
No non-return valves on the inlets.
- **Anti-scalding failsafe:** immediate shut-off if cold or hot water supply fails.
- **Securitouch thermal insulation prevents burns.**
- Swivelling outlet H. 105mm L. 200mm.
- Retracting hand spray with 2 jet options: flow straightener/rain effect.
- Scale-resistant **sequential thermostatic cartridge.**
- Temperature control: cold water up to 40°C.
- Temperature limiter set at 40°C.
- **Body with smooth interior** (reduces bacterial development).
- Flow rate regulated at 3 lpm.
- No manual contact thanks to Hygiene control lever L. 100mm.
- **BIOSAFE flexible shower hose reduces bacterial proliferation:** transparent polyurethane, ensures timely replacement if biofilm is present; smooth interior and exterior.
- Flexible with narrow interior: low water volume.
- Specific counterweight.
- PEX flexibles F $\frac{3}{8}$ ".
- Fixing reinforced by 2 stainless steel rods.
- Suitable for people with reduced mobility.
- 10-year warranty.

Surgical scrub-up trough with high upstand 3 services **187000** - TEMPOMATIC electronic tap with BIOCLIP spout **20804T215**
Stainless steel paper towel dispenser **6607D**

TEMPOMATIC tap with BIOCLIP spout

Wall-mounted electronic tap with mains supply

- Independent IP65 electronic control unit.
- 230/12V mains supply with transformer.
- Supplied with 2 removable BIOCLIP stainless steel spouts
L. 190mm Ø 28mm for continuous use during cleaning/disinfection.
Can be replaced with a BIOFIL filter or disposable Hostaform® spout (see page 87).
- Base and spout with smooth interiors (reduces bacterial development).
- Adjustable duty flush
(pre-set flush ~60 seconds every 24 hours after last use).
- Flow rate limited to 4 lpm at 3 bar.
- Shock-resistant infrared presence detection sensor.
- Separate sensor for mounting on panels.
- Ø 60mm chrome-plated brass base.
- Solenoid valve Ø 15mm for compression fittings with integrated filter.
- Anti-blocking security.
- Recommended installation height: 110 - 200mm above the basin surface.
- Suitable for people with reduced mobility.
- 10-year warranty.

Two shut-off options:

Standard mode: timed flow with automatic shut-off.

ON/OFF mode: user shuts off flow voluntarily or automatic shut-off after 30 minutes of flow.

Thermal shocks are possible.

20804T215

Quick and easy to install:

- 1 Turn the stainless steel spout through 90° clockwise then pull it towards you to remove it.
- 2 Put another spout in its place.

TEMPOMATIC wall-mounted tap with BIOCLIP spout	20804T215	£524.43
--	-----------	---------

We recommend installing a TMV (see page 102)

Option: stainless steel spouts, disposable spouts or BIOFIL filter spouts (see page 87)

TEMPOMATIC tap

Cross wall electronic tap with mains supply

- Independent IP65 electronic control unit.
- 230/12V mains supply with transformer.
- Scale-resistant flow straightener.
- Adjustable duty flush
(pre-set flush ~60 seconds every 24 hours after last use).
- Flow rate pre-set at 3 lpm at 3 bar, can be adjusted from 1.4 - 6 lpm.
- Shock-resistant infrared presence detection sensor for walls ≤ 155mm.
- Anti-blocking security.
- Solenoid valve Ø 15mm for compression fittings with integrated filter.
- Chrome-plated fixed spout L. 170mm for walls ≤ 165mm with anti-rotating pin and back nut.
- Wall plate flush to the wall.
- Threaded rods can be cut to size.
- Recommended installation height: 110 - 200mm above the basin surface.
- Suitable for people with reduced mobility.
- 10-year warranty.

44115715

TEMPOMATIC cross wall tap	44115715	£517.42
---------------------------	----------	---------

We recommend installing a TMV (see page 102)

Alternative spout and cross wall lengths available on request

BINOPTIC

Recessed or cross wall electronic mixer and tap with mains supply

- Independent IP65 electronic control unit.
- 230/12V mains supply with transformer.
- Scale-resistant flow straightener.
- Spout with smooth interior and low water volume (reduces bacterial development).
- Adjustable duty flush (pre-set flush ~60 seconds every 24 hours after last use).
- Flow rate pre-set at 3 lpm at 3 bar, can be adjusted from 1.4 - 6 lpm.
- Active, infrared presence detection, sensor at the end of the spout optimises detection.
- Filters, solenoid valves, and Ø 15mm conical inlets.
- Chrome-plated brass body.
- Cable L. 1.5m for sensor, flexibles and mounting all pass through the same hole for cross wall models.
- Anti-blocking security.
- Side temperature control with adjustable maximum temperature limiter on mixers.
- Recommended installation height: 110 - 200mm above the basin surface.
- Suitable for people with reduced mobility.
- 10-year warranty.

TEMPOMATIC 4

Wall-mounted electronic mixer and tap, mains supply or battery-operated

- 230/6V mains supply or integrated CR123 6V Lithium batteries.
- Reduced-stagnation solenoid valve and electronic unit integrated within the body of the mixer or tap.
- Scale-resistant flow straightener.
- Duty flush (~60 seconds every 24 hours after last use).
- Flow rate pre-set at 3 lpm at 3 bar, can be adjusted from 1.4 - 6 lpm.
- Active, infrared presence detection, sensor at the end of the spout optimises detection.
- Chrome-plated stainless steel body.
- Cap fixed in place by 2 concealed screws.
- Stopcocks.
- Anti-blocking security.
- Side temperature control with adjustable maximum temperature limiter on mixers.
- Recommended installation height: 110 - 200mm above the basin surface.
- Suitable for people with reduced mobility.
- 10-year warranty.

2640P: THE ONLY SEQUENTIAL MECHANICAL MIXER THAT ALLOWS THERMAL SHOCKS WITHOUT REMOVING THE CONTROL LEVER

Improved ergonomics and functionality

The new generation of wall-mounted mechanical mixers with a ceramic cartridge is sequential: the same lateral movement over a 70° range opens the water flow and adjusts the temperature.

Opens and closes with cold water

The 2640P sequential mechanical mixer opens and closes with cold water for increased anti-scalding safety.

Cold water

Opening with cold water, without any passage of hot water, ensures the supply of only cold water if required (exclusive to DELABIE).

Sequential: opens and closes with cold water

BIOSAFE: no contact with chrome, nickel or lead

The internal design of the 2640P mixer prevents the water from coming into contact with chrome, nickel or lead. Therefore, the water delivered is safer and purer.

Low volume of standing water in the body

DELABIE's sequential mechanical mixers have been specifically designed to reduce the volume of standing water in the body and, therefore, significantly reduce the risk of bacterial development. In effect, water flows from the inlets to the spout outlet via narrow tubes which can only hold a limited volume of water.

Maximum temperature limiter

The 2640P mixer is supplied with a pre-set maximum temperature limiter. The user cannot increase the temperature above the maximum set temperature, reducing the risk of scalding.

Thermal shock feature

The 2640P wall-mounted sequential mixer allows thermal shocks at the temperature of the Hot Water in the system without removing the control lever or shutting off the Cold Water supply.

To override the temperature limiter, simply press the little red button behind the control lever.

For more information see page 11.

Securitouch technology

The body of these mixers has thermal insulation, reducing the risk of burns. Hot water flows from the inlets to the cartridge inside narrow tubes and is, therefore, never in contact with the walls of the mixer.

Comfort: optimised hand washing

thanks to an increased spout length.

Ergonomic controls

The Hygiene control lever enables control without manual contact using the wrist, the forearm or the elbow.

Swivelling or fixed spout

Length and type of spout suitable for different uses in hospital settings (hand washing, rinsing equipment, filling buckets...).

Water and energy savings

These wall-mounted mixers enable a significant reduction in water consumption whilst ensuring optimal user comfort.

For more information see page 13.

Sequential control to open/close

Very low water volume

Thermal shock feature

Securitouch technology: tube insulated from the mixer body

Securitouch mixer

Wall-mounted sequential mechanical mixer with ceramic cartridge, internal tube with smooth interior

- **Sequential over a 70° range:** opens and closes with cold water (see page 89).
- **Swivelling under spout** with **BIOSAFE hygienic outlet** suitable for fitting a BIOFIL point-of-use filter (see page 21).
- **Spout can be fixed in place easily.**
- **Securitouch thermal insulation prevents burns.**
- Ø 35mm ceramic cartridge.
- Pre-set maximum temperature limiter.
- **Body and spout with tubes with smooth interiors and very low water volume** (reduces bacterial development).
- **Thermal shocks are easy to undertake** without removing the control lever or shutting off the CW supply (see page 11).
- Flow rate regulated at 5 lpm.
- Hygiene control lever L. 200mm.
- Supplied with 2 in-line STOP/CHECK wall connectors M $\frac{1}{2}$ " M $\frac{3}{4}$ " (see page 104).
- Suitable for people with reduced mobility.
- 10-year warranty.

Smooth tube interior

- Ceramic valve heads.
- Supplied with 2 offset wall connectors M $\frac{1}{2}$ " M $\frac{3}{4}$ " (see page 104).
- 10-year warranty.

5445T2S

Wall-mounted mechanical mixer with ceramic valve heads	5445T2S	£192.11
---	----------------	----------------

Options: wastes (see page 103), other connectors available (see page 104)

DELABIE

Accessories for basins & sinks

BASIN & SINK
ACCESSORIES
96

Electronic liquid soap dispenser

Battery-operated

- **Vandal-resistant model with lock and standard DELABIE key.**
- **No manual contact:** hands are automatically detected by infrared cell (detection distance can be adjusted).
- **Bacteriostatic 304 stainless steel cover.**
- **One-piece hinged cover** for easy maintenance and better hygiene.
- **No waste pump dispenser:** dispenses 0.8ml (can be adjusted up to 7 doses per activation).
- Option of operation in **anti-clogging mode.**
- Power supply: 6 AA -1.5V (DC9V) batteries supplied integrated in the soap dispenser body.
- Low battery indicator light.
- Tank with large opening: easy to refill soap from large containers.
- Window allows soap level to be checked.
- Stainless steel thickness: 1mm.
- Capacity: 1 litre.
- For vegetable-based liquid soap with a maximum viscosity of 3,000 mPa.s.
- Compatible with hydroalcoholic gel.
- CE marked.
- 10-year warranty.

512066

Electronic soap dispenser - 1 litre		
Bright 304 stainless steel	512066P	£215.48
Satin 304 stainless steel	512066S	£215.48
White powder-coated 304 stainless steel	512066W	£215.48

Liquid soap dispenser

With soft-touch operation

- **Vandal-resistant model with lock and standard DELABIE key.**
- **Bacteriostatic 304 stainless steel cover.**
- **One-piece hinged cover** for easy maintenance and better hygiene.
- **Push-button with soft-touch operation.**
- **Anti-blocking:** single dose per press even when the button is pressed for long periods.
- No waste, non-drip (waterproof) pump-action dispenser.
- Tank with large opening: easy to refill soap from large containers.
- Tank prevents long-term stagnation of soap.
- Window allows soap level to be checked.
- Stainless steel thickness: 1mm.
- Capacity: 0.5 or 1 litre.
- 0.5 litre model dimensions: 90 × 105 × 185mm.
- 1 litre model dimensions: 90 × 105 × 252mm.
- For vegetable-based liquid soap with a maximum viscosity of 3,000 mPa.s.
- Compatible with hydroalcoholic gel.
- 10-year warranty.

510580

510583

Liquid soap dispenser - 0.5 litre		
Bright 304 stainless steel	510583	£110.78
Satin 304 stainless steel	510586	£103.74
White powder-coated 304 stainless steel	510584	£97.97
Liquid soap dispenser - 1 litre		
Bright 304 stainless steel	510580	£117.83
Satin 304 stainless steel	510582	£110.34
White powder-coated 304 stainless steel	510581	£104.23

Liquid soap dispenser

ABS

- White ABS.
- Push-button with non-drip system.
- With lock.
- Level control.
- **Capacity: 0.9 litre.**
- Ref. 374001 dimensions: 95 × 130 × 235mm.
- Ref. 6712 dimensions: 105 × 130 × 215mm.
- 10-year warranty.

6712

Hypereco liquid soap dispenser		
With hand control	374001	£72.56
With elbow control	6712	£75.61

Liquid soap dispenser

Deck-mounted, straight spout

- Model for installing on washbasins.
- **Vandal-resistant model.**
- Chrome-plated brass body and push-button.
- Non-drip system (waterproof).
- **Mechanism can be locked via a grub screw.**
- Models with tank: top fill (by unscrewing the push-button) or from the lower part (by unscrewing the bottle).
- Model 729108: fill beneath the basin by changing the container.
- Models with a tank: compatible with hydroalcoholic gel.
- 10-year warranty.

729008

729508

Liquid soap dispenser with straight spout		
With 1 litre bottle	729008	£99.01
With 0.5 litre bottle	729508	£99.01
With 1.20m flexible tube for remote tanks	729108	£99.01

Liquid soap dispenser

Deck-mounted, curved spout

- Model for installing on washbasins.
- **Vandal-resistant model.**
- Chrome-plated brass body and push-button.
- Non-drip system (waterproof).
- **Mechanism can be locked via a grub screw.**
- Models with tank: top fill (by unscrewing the push-button) or from the lower part (by unscrewing the bottle).
- Model 729112: fill beneath the basin by changing the container.
- Models with a tank: compatible with hydroalcoholic gel.
- 10-year warranty.

729012

729512

Liquid soap dispenser with curved spout		
With 1 litre bottle	729012	£103.88
With 0.5 litre bottle	729512	£103.88
With 1.20m flexible tube for remote tanks	729112	£103.88

Cross wall liquid soap dispenser

Wall-mounted for cross wall installation

- **Vandal-resistant model for cross wall installation, for walls up to 190mm.**
- Chrome-plated brass body and push-button.
- Non-drip system (waterproof).
- **Mechanism can be locked via a grub screw.**
- **For remote tanks** (tank not supplied), with 1.20m flexible tube.
- 10-year warranty.

729150

Cross wall liquid soap dispenser for remote tanks	729150	£111.97
--	---------------	----------------

SPOUT OUTLETS FOR MIXERS AND TAPS

Spout outlets are susceptible to bacterial growth (*Pseudomonas aeruginosa*, *Legionella spp.*, etc.) since the presence of air and water encourages the proliferation of bacteria. There are different types of spout outlets available more or less suited to the issues faced by hospitals, particularly the fight against bacterial proliferation.

Conventional aerators

Aerators in tap spouts are prohibited in healthcare facilities, particularly in the area of Legionella prevention. In effect, aerators create an air/water mix which increases the risk of aerosol formation. Moreover, the fine grids in an aerator retain impurities which are conducive to bacterial growth.

Scale build-up on aerator causes splashing

Flow from a BIOSAFE outlet: good flow, with no splashing

BIOSAFE spout outlet

BIOSAFE hygienic outlet

Made from Hostaform®, its smooth internal surface provides **nowhere for impurities or scale to adhere** (no grid, partitions or star-shaped structure) reducing the emergence and spread of bacteria and germs in damp conditions.

It can only be installed on a mixer or tap that already has a restricted flow rate to ensure a good flow, with no splashing.

For more information see page 8.

Certain DELABIE's mixers and taps already have the BIOSAFE outlet fitted as standard.

The BIOSAFE outlet is also available as an option (*see opposite*).

Flow straightener

To reduce these risks, flow straighteners are highly recommended for spout outlets. All DELABIE's mixers and taps are supplied with flow straighteners that are specially developed for healthcare facilities. They do not have a mesh and they do not aspirate air. In comparison with traditional aerators, DELABIE's flow straighteners are made from a material that limits scale build-up. However, even though its development can be slowed, scale build-up is inevitable.

In healthcare facilities, the maintenance staff remove flow straighteners regularly (sometimes very frequently) to clean/disinfect them as part of the cleaning protocols put in place by infection control teams in hospitals.

To minimise maintenance, DELABIE recommends a revolutionary device to replace the flow straightener - the BIOSAFE outlet.

BIOSAFE hygienic outlet F22/100

- Free flow outlet F22/100 with no grid or partitions in contact with the water.
- Water cannot stagnate in the internal part.
- Made from Hostaform® (scale-resistant material).
- Chrome-plated brass collar.

This BIOSAFE outlet can only be installed on a mixer or tap with a restricted flow rate (5 lpm maximum) to ensure a good flow with no splashing.

923022

BIOSAFE hygienic outlet F22/100		
For 25061T1, 2506T1 & H9726 (each)	923022	£7.69
For 25061T1, 2506T1 & H9726 (50 per pack)	923022.50P	£274.59

BIOSAFE hygienic outlet M24/100

- Free flow outlet M24/100 with no grid or partitions in contact with the water.
- Water cannot stagnate in the internal part.
- Made from Hostaform® (scale-resistant material).
- Chrome-plated brass collar.

This BIOSAFE outlet can only be installed on a mixer or tap with a restricted flow rate (5 lpm maximum) to ensure a good flow with no splashing.

923024

922640

BIOSAFE hygienic outlet M24/100		
For 2520 range (each)	923024	£7.69
For 2520 range (50 per pack)	923024.50P	£274.59
For 2620 range (each)	926024	£7.69
For 2564, 2565 & 2640 ranges	922640	£9.55

BIOSAFE hygienic outlet M16.5/100

- BIOSAFE outlet M16.5/100 for 2920 and 2664/2665 ranges.
- Free flow outlet with no grid or partitions in contact with the water.
- Water cannot stagnate in the internal part.
- Made from Hostaform® (scale-resistant material).

This BIOSAFE outlet can only be installed on a mixer or tap with a restricted flow rate (5 lpm maximum) to ensure a good flow with no splashing.

922660

Provisional availability 1st half 2023.
Please contact sales office to check availability.

BIOSAFE hygienic outlet M16.5/100	922660	£7.38
-----------------------------------	---------------	--------------

Hygienic flow straightener

- Star-shaped with no grid: reduces bacterial development.
- Chrome-plated brass collar.
- Supplied in packs of 2 or 50.

921024.2P

921022.2P

Hygienic flow straightener		
M24/100 (2 per pack)	921024.2P	£9.47
M24/100 (50 per pack)	921024.50P	£202.81
F22/100 (2 per pack)	921022.2P	£9.47
F22/100 (50 per pack)	921022.50P	£202.81

ECO flow straightener

Pre-set at 3 lpm

- Scale-resistant flow straightener pre-set at 3 lpm (DELABIE patented).
- Flow rate can be adjusted from 1.4 - 6 lpm at 3 bar (depending on the tap/mixer model) from the outside using a 2.5mm Allen key.
- Flow straightener with no grid: reduces bacterial development (no water or impurity retention).
- Supplied in packs of 2.

The water savings generated by the ECO flow straightener surpass the requirements of class "Z" of the European standard EN 246.

922022.2P

Scale-resistant ECO flow straightener		
M24/100	922024.2P	£10.80
F22/100	922022.2P	£10.80

Chrome-plated Allen key

- 2.5mm Allen key.
- For adjusting the flow rate on the ECO flow straightener (see left) from the outside.

C282025

Chrome-plated Allen key	C282025	£11.97
-------------------------	----------------	---------------

TEMPOGENOU

Knee-operated time flow basin valve

- **Time flow ~7 seconds.**
- Flow rate pre-set at 3 lpm at 3 bar, can be adjusted from 1.4 - 6 lpm.
- Reinforced control lever.
- Solid brass wall plate with reinforced fixing via 4 stainless steel screws on the in-line models.
- Cold or mixed water supply.
- **Chrome-plated solid brass body.**
- 10-year warranty.

73544715

734100

TEMPOGENOU valve		
Straight for in-line inlet, stud nut	735000	£131.38
Straight for in-line inlet, M1/2"	735400	£121.01
Straight for in-line inlet, Ø 15mm for compression fittings	73544715	£153.68
Angled for recessed inlet, M1/2"	734100	£120.89

We recommend installing a TMV (see page 102)

Option: spouts (see opposite)

MIXFOOT/MONOFOOT

Foot-operated basin mixer/valve with instant shut-off

- **Instant automatic shut-off.**
- **Pedal can be raised for cleaning the floor.**
- Adjustable pedal height.
- Fixed by 4 screws.
- Filters.
- Pre-set mixing can be adjusted on the MIXFOOT mixer version: opens with cold water up to half open, and mixed water delivered from half open to fully open (pedal touching the floor).
- Available for floor or wall-mounting.
- 10-year warranty.

739000

736102

MIXFOOT mixer		
Floor-mounted, stud nut Ø 14mm	739000	£204.98
Floor-mounted M1/2"	739100	£200.26
Wall-mounted M1/2"	739102	£210.21
MONOFOOT valve		
Floor-mounted, stud nut Ø 14mm	736001	£179.28
Floor-mounted M1/2"	736101	£172.08
Wall-mounted M1/2"	736102	£197.01

We recommend installing a TMV (see page 102) with the MONOFOOT valve

Option: spouts (see opposite)

Wall-mtd mixer with BIOCLIP spout

For panels < 20mm

- Ø 60mm base in chrome-plated brass, order a hands-free control to complete.
- Supplied with **2 removable BIOCLIP stainless steel spouts** L. 190mm Ø 28mm for continuous use during cleaning and disinfection. Can be replaced with a BIOFIL filter or disposable Hostaform® spout (see page 87).
- **Base and spout with smooth interiors** (reduces bacterial development).
- 10-year warranty.

1804T2

Wall-mounted mixer with BIOCLIP spout	1804T2	£196.95
--	---------------	----------------

Options: BIOFIL filter spouts (see page 23), hands-free controls (see opposite) or electronic mixers/taps.

Fixed spout

Wall-mounted/Cross wall

- Spout Ø 32mm, M1/2".
- Chrome-plated solid brass.
- Scale-resistant flow straightener regulated at 3 lpm.
- 10-year warranty.

947151

Cross wall spout with wall plate		
L. 120mm	947151	£120.68
L. 170mm	947157	£145.31

Wall-mounted spout, no wall plate (recessed inlet)		
L. 110mm	947120	£74.72
L. 160mm	947170	£96.10

Wall-mounted spout with wall plate (recessed inlet)		
L. 120mm	947135	£87.09

Fixed L-shaped spout

Wall-mounted

- Tubular spout Ø 18mm, M1/2".
- L. 120mm.
- Chrome-plated brass.
- Flow straightener.
- 10-year warranty.

941922

Fixed wall-mounted L-shaped spout		
Star-shaped flow straightener	941120	£45.18
Flow straightener regulated at 3 lpm for panels ≤ 10mm	941922	£54.65

Fixed spout

Cross wall

- Spout L. 75mm, M1/2".
- For cross wall installation with anti-rotating pin.
- Threaded rod can be cut to size.
- Streamlined, ligature-resistant design.
- Chrome-plated solid brass.
- Star-shaped scale-resistant flow straightener.
- 10-year warranty.

942200

Fixed cross wall spout		
For walls ≤ 230mm	942200	£86.55
For panels ≤ 30mm	942040	£70.40
Back-nut with 3 screws	826315	£10.26

Alternative cross wall lengths available on request

Tubular spout

Deck-mounted

- Tubular spout on base, M1/2".
- Chrome-plated brass.
- Spout with smooth interior (reduces bacterial development).
- Scale-resistant flow straightener.
- 10-year warranty.

1306T1

204001

Swivelling tubular spout Ø 22mm		
L. 150 H. 140, 3 lpm	1306T1	£105.84
L. 200 H. 260, 3 lpm	1306T2	£122.55

Fixed cast spout	981142	£99.27

PREMIX NANO

Thermostatic mixing valve

- For 1 - 2 taps or 1 shower.
- **Anti-scalding failsafe:** automatic shut-off if hot or cold water supply fails.
- Temperature pre-set at 38°C, can be adjusted by the installer from 34 - 60°C.
- Brass body.
- **Filters and non-return valves.**
- Recommended flow rate range: 3 - 12 lpm.
- **Thermal shocks are possible.**
- 10-year warranty.

732115 / 732116

PREMIX NANO (from 3 - 12 lpm)		
Nickel-plated body M½", Ø 15mm	732115	£87.66
Polished chrome body M½", Ø 15mm	732116	£103.17

PREMIX COMPACT

Thermostatic mixing valve

- For 2 to 10 sanitary points-of-use (depending on the flow rate).
- **Anti-scalding safety:** shuts off automatically if cold or hot water supply fails.
- Temperature pre-set at 38°C, can be adjusted by the installer from 30 - 60°C.
- Brass body.
- **Filters and non-return valves.**
- Recommended flow rate range:
 - ½": from 5 - 20 lpm
 - ¾": from 5 - 25 lpm.
- **Thermal shocks are possible.**
- 10-year warranty.

733115

733116

PREMIX COMPACT		
M½", Ø 15mm for 2 - 7 taps from 5 - 20 lpm	733115	£122.01
M¾", Ø 15mm for 2 - 10 taps from 5 - 25 lpm	733116	£165.17

ON/OFF waste

With stainless steel valve

- Washbasin waste M1¼" with stainless steel valve **with free flow**.
- Recommended for all washbasins equipped with electronic or time flow mixers & taps and washbasins with an overflow.
- Open/close by pressing the top of the waste.
- 10-year warranty.

581000

ON/OFF waste	581000	£36.31
---------------------	---------------	---------------

HYGIÉNA waste

With chrome-plated brass concave grid

- Hygienic washbasin waste, M1¼".
- **Concave grid** (no water retention).
- **Free flow, with no central screw** (avoids scale deposits and reduces bacterial development).
- Polished chrome-plated brass grid, chrome-plated ABS body.
- Long model: can be tightened, min. 1mm, max. 45mm; **pre-scored waste** (snap off sections easy to remove for models with overflow). Short model: can be tightened, min. 1mm, max. 2mm; **for stainless steel washbasins**.
- Conforms to norm EN 274-1.
- 10-year warranty.

6110

611

HYGIÉNA waste		
Long model	611	£31.02
Short model	6110	£31.02

Waste

With stainless steel grid

- Stainless steel grid Ø 63mm for covering holes up to Ø 54mm maximum.
- Outlet M1¼".
- Central screw.
- 10-year warranty.

580000

Waste with stainless steel grid	580000	£12.78
--	---------------	---------------

Waste with valve

- Outflow M1¼".
- Chrome-plated brass.
- 10-year warranty.

620

Brass waste with valve	620	£35.48
-------------------------------	------------	---------------

Trap with horizontal outlet

- Inlet F1¼".
- Horizontal outlet Ø 32mm with nut.
- Water level 50mm.
- Chrome-plated brass.
- 10-year warranty.

517000

Trap with horizontal outlet	517000	£62.29
------------------------------------	---------------	---------------

Tap hole cover

- Ø 45mm tap hole cover for holes up to Ø 32mm maximum.
- Chrome-plated brass.
- 10-year warranty.

596000

Tap hole cover	596000	£13.24

STOP/CHECK connectors

Wall-mounted connectors M1/2" M3/4"

- Offset chrome-plated connectors Ø 65mm L. 62mm for wall-mounted mixers.
- M1/2" M3/4".
- Chrome-plated brass connectors.
- Supplied in packs of 2.
- **Ideal for hospitals.**
- 10-year warranty.

Connectors include:

Manual escutcheon control:

stopcock position and/or non-return valve check.

STOP function:

- Allows isolation of the water supply so that the mixer can be easily removed for descaling, cleaning or maintenance.
- Allows automatic anti-scalding safety to be checked on SECURITHERM thermostatic and EP pressure-balancing mixers.

CHECK function:

Allows non-return valves to be checked on the respective mixer (DELABIE patent).

855755UK.2P

STOP/CHECK connectors		
Inline	855755UK.2P	£84.34
Offset, 12mm centres	855755.2P	£71.07

Offset standard connectors

Wall-mounted connectors M1/2" M3/4"

- Offset chrome-plated standard connectors, 11mm centres, L. 50mm for wall-mounted mixers.
- M1/2" M3/4".
- Escutcheon Ø 64mm.
- Chrome-plated brass.
- Supplied in packs of 2.
- 10-year warranty.

Reinforced exposed connector

For M1/2" stopcocks

- Reinforced chrome-plated brass exposed connector.
- Ø 14mm stud nut.
- MF1/2".
- Fixed by 2 screws 5 × 35mm (supplied).
- 10-year warranty.

841315

Exposed connector	841315	£38.25
-------------------	--------	--------

Connector with non-return valve

Chrome-plated brass connector

- Connectors with integral filter to prevent backflow of contaminated water into the system.
- Prevent cross flow of cold and hot water.
- Supplied in packs of 2.
- 10-year warranty.

C291AH75

C151AH75

Connector with non-return valve		
For flexibles FM1/2"	C291AH75	£27.72
For flexibles FM3/8"	C151AH75	£23.09

Copper tails

To supply mixers and taps

- Soft-tempered copper tails.
- Can be installed instead of PEX flexibles.
- Better conductors than flexibles.
- Improves efficiency of thermal shocks.
- Supplied in packs of 2.
- 10-year warranty.

Pro tip: Don't forget to include non-return valves on the copper tails if the PEX flexibles to be replaced have integral non-return valves.
Call our Technical team for further information.

811610.2P

ANTI-SCALDING SAFETY

Maximum temperature limiter

All DELABIE's mixers are supplied with a **pre-set maximum temperature limiter**. The user cannot increase the temperature above the maximum set temperature, reducing the risk of scalding.

Automatic anti-scalding failsafe

• **SECURITHERM thermostatic technology** ensures immediate hot water shut-off if the cold water supply fails. If the cold water supply fails, the European standard EN 1111 allows a slight leak of hot water (0.10L/10 seconds).

With DELABIE's thermostatic mixers **the hot water shut-off is complete** (with no trickle of water).

If the hot water supply fails, DELABIE's SECURITHERM mixers also shut off the cold water supply.

This avoids the risk of cold showers which may result in a loss of balance or a fall.

• **SECURITHERM pressure-balancing technology**, known as EP, ensures instant and automatic safety. **If the Cold Water supply fails, the Hot Water flow rate is reduced, removing the risk of scalding for the user.** If the Hot Water supply fails, the Cold Water flow rate is likewise reduced.

Securitouch technology

Specifically designed for patients, people with reduced mobility, the elderly and children, Securitouch technology provides increased safety for superior comfort.

All the internal parts of DELABIE's mixers are specifically designed to reduce the risk of burns when touching the mixer.

For more information see page 11.

Thermal shock feature

With SECURITHERM thermostatic mixers, it is possible to **undertake thermal shocks at the temperature of the hot water in the system.**

For dual control models:

- without removing the control knob, simply press the little red button with a pointed tool to override the maximum temperature limiter.

For refs. H9741TP and H9768TP:

- unscrew the temperature adjustment cap using an Allen key and turn the valve spindle clockwise all the way to the right to override the temperature setting.

For sequential models:

- remove the control lever to unblock the temperature limiter.

AUTO-DRAINING DEVICE

DELABIE recommends installing its auto-draining device (*ref. 880*) on all shower mixers.

This device allows the shower head and flexible hose to drain automatically, essential in the fight against bacterial proliferation.

To be fully effective, DELABIE recommends connecting the auto-draining device to a short flexible shower hose (*ref. 83473 or 83673, page 143*).

Auto-draining shower kits are also available.

They include a mixer fitted with an auto-draining device, a short flexible hose 0.85m long with a shower head and a tilting shower head holder.

BIOSAFE: INFECTION CONTROL

Body with smooth interior

Most shower mixers have bodies with rough interiors. As a result, they provide niches where bacteria can adhere.

All the internal parts of the majority of DELABIE's shower mixers are completely smooth, reducing biofilm attachment and making it easier to treat.

Low volume of standing water in the body

The majority of DELABIE's shower mixers have been specifically **designed to reduce the volume of standing water in the body** and thus significantly reduce the risk of bacterial development.

In effect, water flows from the inlets to the cartridge via narrow tubes which can only hold a limited volume of water. The risk of bacterial proliferation is reduced.

No non-return valves

HW/CW cross flow is impossible

DELABIE has developed a unique system that enables **thermostatic mixers to shut off the Hot Water and Cold Water directly at the inlets**, making non-return valves completely redundant.

Cross flow between the HW and CW is impossible. This reduces the risk of bacterial development considerably.

(For more information see page 112 and 116).

COMFORT AND ERGONOMICS

Temperature stability

• **SECURITHERM thermostatic mixers** ensure stable temperatures regardless of pressure and flow rate variations in the system. They respond immediately to any changes.

• **Prevents cold showers:** SECURITHERM technology ensures that the cold water supply shuts off automatically if the hot water supply fails.

• **SECURITHERM EP mixers** compensate for the variations in CW and HW pressure at the inlets. They ensure that the water temperature at the outlet remains stable for the user, removing the risk of scalding or cold showers.

• **DELABIE's mechanical mixers** are fitted with an exclusive solution which effectively reduces temperature variations if there are pressure variations in the system.

However, mechanical mixers do not have the precision of thermostatic or EP mixers and they are not fitted with an anti-scalding safety.

They provide an intermediate economic solution.

Reduced risk of Hot Water/Cold Water cross flow

On the new generation of DELABIE's mechanical mixers, **the hot water can only flow back into the cold water supply (or vice versa) if the pressure differential between the inlets is greater than 1 bar.** Therefore, the risk of cross flow between the HW/CW is very small, unlike other mixers.

As a result, the risk of bacterial proliferation is reduced. Moreover, **this solution removes the need for non-return valves to be installed.**

Body with smooth interior

Low volume of standing water

Securitouch technology: cool-touch

Auto-draining device

SECURITHERM Securitouch shower mixer

Sequential thermostatic mixer, with no non-return valves

- **Sequential:** opens and closes with cold water (see page 112).
- **No risk of cross flow between hot and cold water.**
No non-return valves on the inlets.
- **Anti-scalding failsafe:** immediate shut-off if cold water supply fails.
- **Prevents cold water showers:** shuts off automatically if hot water supply fails.
- **Securitouch thermal insulation prevents burns.**
- Scale-resistant **sequential thermostatic cartridge.**
- Temperature control: cold water up to 39°C.
- Temperature limiter set at 39°C.
- Thermal shocks are possible.
- **Body with smooth interior and low water volume** (reduces bacterial development).
- Flow rate regulated at 9 lpm.
- Hygiene control lever L. 100mm.
- Top or bottom outlet options.
- Supplied with 2 in-line STOP/CHECK wall connectors (ref. 855755UK.2P see page 144).
- Suitable for people with reduced mobility.
- 10-year warranty.

100% WATERPROOF, THE H9633 RECESSED SEQUENTIAL IS WELL CONNECTED!

Improved ergonomics and functionality

The same lateral movement, through a 180° range, opens the water flow and adjusts the temperature.

Opens and closes with cold water

SECURITHERM sequential mixers open and close with cold water for increased anti-scalding safety.

Cold water draw-off

Opening with cold water, without any passage of hot water, ensures the supply of only cold water if required.

BIOSAFE: infection control HW/CW cross flow is impossible

DELABIE has developed a unique system that enables sequential thermostatic mixers to shut off the Hot Water and Cold Water directly at the inlets, making non-return valves redundant. Cross flow between the HW and CW is impossible. This reduces the risk of bacterial development considerably. *For more information see page 9.*

Low volume of standing water in the body

Sequential thermostatic mixers have just one mechanism instead of two like dual control models. As a result, fewer components are in contact with the water and there is less standing water in the mixer. The risk of bacterial development is reduced.

Automatic anti-scalding failsafe

SECURITHERM thermostatic technology ensures immediate hot water shut-off if the cold water supply fails. If the cold water supply fails, the European standard EN 1111 allows a slight leak of hot water (0.10L/10 seconds).

With DELABIE's thermostatic mixers, the hot water shut-off is complete (with no trickle of water). If the hot water supply fails, DELABIE's SECURITHERM mixers also shut off the cold water supply. This avoids the risk of cold showers which may result in a loss of balance or a fall.

Maximum temperature limiter

DELABIE's sequential thermostatic mixers are supplied with a pre-set maximum temperature limiter. The user cannot increase the temperature above the maximum set temperature, reducing the risk of scalding.

Thermal shock feature

With SECURITHERM sequential thermostatic mixers, it is possible to undertake thermal shocks at the temperature of the hot water in the system.

Remove the control lever to override the temperature limiter.

Temperature stability

SECURITHERM sequential thermostatic mixers ensure stable temperatures regardless of pressure and flow rate variations in the system. They respond immediately to any changes.

In addition, they prevent cold showers ensuring that the cold water supply shuts off if the hot water supply fails.

100% waterproof

Standard housings on the market are designed to be cut to size flush to the wall, which increases the risk of leaks between the wall and the collar.

DELABIE's recessed housing is equipped with a collar with integrated seal that clips onto the housing once the wall finish is in place (patented system).

It is completely waterproof without silicone.

Any condensation is evacuated via the plate.

The wall stays intact throughout.

The H9633 recessed sequential mixer is fitted with an elbow outlet which connects directly onto the control plate: the product is therefore 100% waterproof.

Modular

Attachable from the sides, front or behind, DELABIE's recessed housing can be used on plasterboard rails, on load-bearing walls or even thin panels, the installation is therefore modular, adapting to the type of project.

Plasterboard rails

Load-bearing walls

Thin panels

Adaptable

It is the ideal positioning of the collar that enables the housing to be cut to size lengthwise depending on the wall thickness whilst still guaranteeing complete waterproofing. Thin or thick, the housing adapts to all the requirements of walls from 10 to 120mm.

Quick and easy to install

The recessed sequential mixer can be connected to standard pipes or "pipe-in-pipe".

The hydraulic connection is made from the outside of the housing. During the installation, the sequential cartridge and filter are replaced by a temporary cap to flush the system safely, without damaging the technical elements.

10-year warranty against any manufacturing defects.

Sequential control to open/close

Body with smooth interior

Auto-draining device

SECURITHERM recessed shower mixer

Sequential thermostatic mixer in a waterproof housing

- **Mixer with scale-resistant sequential thermostatic cartridge:**
 - Opens and closes with cold water (see page 112).
 - **No risk of cross flow between hot and cold water.**
 - **No non-return valves** on the inlets.
 - **Anti-scalding failsafe:** immediate shut-off if cold water supply fails.
 - **Prevents cold showers:** shuts off automatically if hot water supply fails.
 - **Securitouch thermal insulation prevents burns.**
 - Temperature control: cold water up to 39°C.
 - Maximum temperature limiter set at 39°C.
 - Thermal shocks are possible.
 - Flow rate regulated at 9 lpm (mixer only), 6 lpm at 3 bar with shower head.
 - M³/₄" inlets with integrated filters.
- Order a wall-mounted shower head or outlet to complete (see pages 137 and 145).
- Bright polished stainless steel wall plate 166 × 166mm.
- **Waterproof recessing housing** (see page 113):
 - Collar with waterproof seal.
 - Hydraulic connection from the outside and maintenance from the front.
 - Adjusts to all types of installation (rails, solid walls, panels).
 - Compatible with wall finishes 10 - 120mm (while maintaining the minimum recessing depth of 93mm).
 - Suitable for standard or "pipe-in-pipe" supply.
 - Stopcocks and flow rate adjustment, filters and cartridge are all integrated and accessible from the front.
 - Supplied in 2 kits: secure system flush without sensitive elements.
- Suitable for people with reduced mobility.
- 10-year warranty.

H9768TP: THE THERMOSTATIC SHOWER MIXER THAT PREVENTS CROSS FLOW

BIOSAFE: infection control HW/CW cross flow is impossible

DELABIE has developed a unique patented system that enables **dual control thermostatic mixers to shut off the Hot Water and Cold Water directly at the inlets.** The design of the H9768TP mixer makes non-return valves completely redundant. As such all risk of cross flow between HW and CW supplies, which creates favourable conditions for bacterial development, is eliminated.

For more information see page 9.

Thermal shock feature

Securitouch technology: cool-touch

Water savings per use

DELABIE'S THERMOSTATIC TECHNOLOGY

- 1 Temperature control
- 2 No non-return valves
- 3 Mixed water
- 4 Mixer opening control
- 5 Mixing chamber

By closing the control 4, the SHW is closed. The thermostatic cell therefore closes the SCW. There is no risk of cross flow between SHW and SCW.

CONVENTIONAL THERMOSTATIC TECHNOLOGY

- 1 Temperature control
- 2 Non-return valves
- 3 Mixed water
- 4 Mixer opening control
- 5 Mixing chamber

Sooner or later, the non-return valves are obstructed by impurities causing cross flow between the SHW and the SCW, responsible for bacterial development.

Low volume of standing water in the body

The H9768TP dual control thermostatic mixer has been specifically **designed to reduce the volume of standing water in the body** and therefore reduce the risk of bacterial development.

Body with smooth interior

All the internal parts of the H9768TP dual control thermostatic mixer are completely smooth, reducing biofilm attachment and making it easier to treat.

For more information see page 8.

Automatic anti-scalding safety

SECURITHERM thermostatic technology ensures immediate hot water shut-off if the cold water supply fails. If the cold water supply fails, the European standard EN 1111 allows a slight leak of hot water (0.10L/10 seconds).

With the H9768TP thermostatic mixer, **the hot water shut-off is complete** (with no trickle of water).

If the hot water supply fails, the H9768TP SECURITHERM mixer also shuts off the cold water supply. This avoids the risk of cold showers which may result in a loss of balance or a fall.

Maximum temperature limiter

The H9768TP dual control thermostatic mixer is supplied with a **pre-set maximum temperature limiter.** The user cannot increase the temperature above the maximum set temperature, reducing the risk of scalding.

Thermal shock feature

With the H9768TP SECURITHERM thermostatic mixer it is possible to **undertake thermal shocks at the temperature of the hot water in the system.**

Unscrew the temperature adjustment cap using an Allen key and turn the valve spindle clockwise all the way to the right to override the temperature setting. For H9769 models simply press the little red button on the control cap with a pointed tool to override the maximum temperature limiter.

For more information see page 11.

Securitouch technology

Specifically designed for patients, people with reduced mobility, the elderly and children, Securitouch technology provides increased safety for superior comfort.

The whole mechanism on the H9768TP SECURITHERM dual control thermostatic mixer is thermally insulated. This reduces the risk of burns when touching the mixer.

Temperature stability

The H9768TP SECURITHERM dual control thermostatic mixer ensures stable temperatures regardless of pressure and flow rate variations in the system. It responds immediately to any changes. Moreover, it is designed to **prevent cold showers** since the cold water shuts off automatically if the hot water supply fails.

Ergonomic controls

The H9768TP SECURITHERM dual control thermostatic mixer is fitted with ergonomic control knobs, ensuring a smooth operation suitable for hospital patients, the elderly or disabled people.

Intuitive identification

Clear visual identification for Hot and Cold water on a Red/Blue coloured index ring.

SECURITHERM Securitouch BIOSAFE shower mixer

Dual control thermostatic mixer, with no non-return valves

- **No risk of cross flow between hot and cold water.**
- **No non-return valves** on the inlets (patented system).
- **Anti-scalding failsafe:** immediate shut-off if cold water supply fails.
- **Prevents cold water showers:** shuts off automatically if hot water supply fails.
- **Securitouch thermal insulation prevents burns.**
- Scale-resistant **thermostatic cartridge** for adjusting the temperature.
- ¼-turn ceramic head for adjusting the flow rate.
- Temperature control: up to 43°C (ref. H9768TP up to 41°C).
- **Double temperature limiter:** 1st limiter set at 41°C, 2nd limiter set at 43°C. For model H9768TP: maximum temperature limiter pre-set to 38°C.
- **Thermal shocks are possible** without removing the control knob or shutting off the cold water supply (see page 11).
- Flow rate limited to 9 lpm at 3 bar.
- M½" shower outlet.
- F¾" inlets with integrated filters.
- Supplied with 2 wall connectors M½" M¾" (see page 144).
- Suitable for people with reduced mobility.
- 10-year warranty.

 - F³/₄" inlets with integrated filters and non-return valves.
- Shower head with flexible hose and chrome-plated, wall-mounted tilting support.
- **Auto-draining device** FM¹/₂" automatically drains the flexible and shower head (see page 144).
- Suitable for people with reduced mobility.
- 10-year warranty.

H9739HYG

SECURITHERM auto-draining shower kit		
Offset STOP/CHECK connectors	H9739HYG	£435.91
Offset standard connectors	H9739SHYG	£381.86

Options: soap dishes (see page 146), floor traps (see page 147), BIOFIL shower head with integrated filter (see page 142), other connectors available (see page 144)

SECURITHERM shower kit with riser rail

With dual control thermostatic mixer

Shower kit with riser rail includes:

- **Dual control mixer with** scale-resistant **thermostatic cartridge:**
 - **Anti-scalding failsafe:** immediate shut-off if cold water supply fails.
 - **Prevents cold water showers:** shuts off automatically if hot water supply fails.
 - Temperature control: 25 - 40°C.
 - Maximum temperature limiter set at 38°C.
 - **Thermal shocks are possible.**
 - Flow rate regulated at 9 lpm.
 - CLASSIC control knobs.
 - M¹/₂" shower outlet.
 - F³/₄" inlets with integrated filters and non-return valves.
- Sliding shower head on a chrome-plated riser rail with flexible hose and soap dish.
- **Shower hose retaining collar.**
- Suitable for people with reduced mobility.
- 10-year warranty.

H9739SKIT

SECURITHERM shower kit with riser rail		
Offset STOP/CHECK connectors	H9739KIT	£478.78
Offset standard connectors	H9739SKIT	£424.73

Options: auto-draining device (see page 144), floor traps (see page 147), BIOFIL shower head with integrated filter (see page 142), other connectors available (see page 144)

Reduced-stagnation solenoid valve

Optimised time flow

Comfortable spray

Choice of sizes and finishes

BIOSAFE: INFECTION CONTROL

Electronic shower panels

- **Open/close automatically, with no manual contact**
DELABIE's electronic shower panels are operated by active infrared detection. Flow opens/shuts off when the detector senses hands.

No manual contact prevents the spread of germs.

- **Anti-bacterial duty flush programme**

DELABIE's electronic shower panels feature a duty flush programme.

An automatic flush takes place for approximately 60 seconds every 24 hours after the last use.

- **Reduced-stagnation solenoid valve**

Most solenoid valves are fitted with a rubber membrane behind which water stagnates and is not renewed. This can lead to bacterial proliferation. DELABIE has developed a technology without a membrane (patented system).

With this piston-operated solenoid valve, water is drained and renewed with every use which reduces niches where bacteria can develop.

Time flow shower panels

- **Automatic timed shut-off, with no manual contact**

DELABIE's time flow shower panels shut off automatically once the push-button has been pressed and the valve has opened.

No manual contact after washing prevents the spread of germs by hand.

SPECIALIST DESIGN

Resistance to intensive use and vandalism

The shower panels are made from durable and resistant materials. The panel fixings are reinforced and concealed. The ends are concealed to make the back of the panel inaccessible. To prevent abuse and waste, the security shut-off system on electronic models prevents the valve from being blocked in continuous flow.

Superior endurance

The piston-operated solenoid valve on electronic models and the hydraulic time flow system with calibrated groove on time flow models are self-cleaning which extends their lifespans to over 500,000 operations.

Simple to maintain

The spare parts are standardised to ensure quick and easy replacement by maintenance staff. Access to the battery on electronic models and mixer cartridge is from the front, without having to remove the panel.

Reliable presence detection

DELABIE has chosen the most reliable detection system for electronic models: infrared active pulse. It cannot be adjusted or affected by variations in light levels.

80% WATER AND ENERGY SAVINGS

Water savings

Compared to conventional showers, these shower panels can offer maximum water savings. They ensure the manager's water bills can be reduced whilst preserving user comfort.

- **Automatic shut-off and split delivery**

- For electronic models:

the shower can be interrupted at any moment by the user. If the user forgets, a security shut-off stops the flow after 60 seconds.

- For time flow models:

the time flow is automatic and shuts off after approximately 30 seconds of flow.

The flow time is reduced to the necessary minimum (wetting, rinsing).

- **Flow rate 6 lpm**

DELABIE's shower panels are regulated at 6 lpm.

The flow rate remains constant regardless of pressure variations in the system.

- **Energy savings**

- For electronic models:

the electronic shower panels do not require much energy to operate. DELABIE has chosen infrared active pulse technology, a low-power consumption solution. The infrared beam is emitted intermittently, saving energy while ensuring effective detection.

- For time flow models:

DELABIE's time flow shower panels operate completely autonomously with no need for an electrical supply. They do not consume any power at all.

The significant hot water savings provided by DELABIE's shower panels also result in energy savings.

COMFORT AND ERGONOMICS

Comfortable to use

- **Electronic SECURITHERM panels with ON/OFF mode: operate with no contact**

Electronic detection allows all users to use the shower with no effort required.

Voluntary activation and closure, with no manual contact, provide perfect hygiene.

- **Prevents cold showers**

SECURITHERM technology ensures the cold water supply shuts off if the hot water supply fails.

- **SECURITHERM time flow panels with Soft technology: soft-touch operation**

DELABIE has developed time flow controls with soft-touch operation. Soft technology allows all users (children, the elderly or people with reduced mobility) to use showers with no effort required.

The shower panels are fitted with a priming system that requires half the effort to operate a conventional shower valve.

Comfortable spray

The specially designed nozzle delivers a comfortable spray which provides effective coverage and a reduced noise level. The spray can be adjusted.

**STREAMLINED DESIGN
LIGATURE-RESISTANT**
Reducing the risk of harm

FLOW RATE REGULATED AT 6 LPM
Water savings

SCALE-RESISTANT SHOWER HEAD
Minimal servicing

ANODISED ALUMINIUM PANEL
Easy to clean

SECURITHERM aluminium shower panel

With electronic thermostatic mixer

- Anodised aluminium shower panel for wall-mounted, exposed installation.
- **SECURITHERM thermostatic shower mixer.**
- Adjustable temperature control from cold water up to 41°C, with maximum temperature limiter.
- **Anti-scalding failsafe:** automatic shut-off if cold water supply fails.
- **Prevents cold showers:** shuts off automatically if hot water supply fails.
- Thermal shocks are possible.
- **Battery-operated with 223 CR-P2 6V Lithium battery.**
- Infrared presence detection. Shower starts when hand is moved towards the sensor (detection distance ~4cm).
- Shuts off voluntarily or automatically after ~60 seconds.
- **Duty flush** (~60 seconds every 24 hours after the last use).
- Flow rate 6 lpm at 3 bar.
- Chrome-plated, tamperproof, scale-resistant **ROUND shower head** with automatic flow rate regulation.
- Concealed fixings.
- Filters and non-return valves.
- Suitable for people with reduced mobility.
- 10-year warranty.

79240015

792410UK

SECURITHERM aluminium electronic shower panel

Top inlet via in-line stopcocks, Ø 15mm for compression fittings	79240015	£1,069.51
Concealed inlet via flexibles, M½"	792410UK	£1,069.51

Option: extension for shower panel (see page 146).

We recommend installing a floor trap (see page 147).

For rain effect nozzle add DP at the end of the reference (see page 137)

SECURITHERM stainless steel shower panel

With electronic thermostatic mixer

- Large, satin stainless steel shower panel for wall-mounted, exposed installation.
- **SECURITHERM thermostatic shower mixer.**
- Adjustable temperature control from cold water up to 38°C with 1st limiter set at 38°C and 2nd limiter set at 41°C (except for ref. 79240415: single temperature limiter set at 41°C).
- **Anti-scalding failsafe:** automatic shut-off if cold water fails.
- **Prevents cold showers:** shuts off automatically if hot water supply fails.
- Thermal shocks are possible.
- **230/6V mains supply** or **223 CR-P2 6V Lithium battery.**
- **Operation:**
 - Mains supply models: shower starts when the electronic push-button is pressed.
 - Battery-operated models: infrared presence detection. Shower starts when hand is moved towards the sensor (detection distance ~4cm).
- Shuts off voluntarily or automatically after ~60 seconds.
- **Duty flush** (~60 seconds every 24 hours after the last use).
- Flow rate 6 lpm at 3 bar.
- Chrome-plated, tamperproof, scale-resistant **ROUND shower head** with automatic flow rate regulation.
- Concealed fixings.
- Filters and non-return valves.
- Stopcocks.
- Suitable for people with reduced mobility.
- 10-year warranty.

 We recommend installing a floor trap (see page 147).
 For rain effect nozzle add DP at the end of the reference (see page 137)

SHOWERS

SECURITHERM aluminium shower panel

With dual control thermostatic mixer and handset

- Anodised aluminium shower panel for wall-mounted, exposed installation.
- **SECURITHERM thermostatic shower mixer.**
- Adjustable temperature control from cold water up to 38°C; with 1st limiter set at 38°C and 2nd limiter set at 41°C.
- **Anti-scalding failsafe:** automatic shut-off if cold water supply fails.
- **Prevents cold showers:** shuts off automatically if hot water supply fails.
- Thermal shocks are possible.
- Soft-touch operation.
- Chrome-plated, tamperproof, scale-resistant **fixed ROUND shower head** with automatic flow rate regulation at 6 lpm at 3 bar.
- **Handset** with removable flexible via rapid push-fit STOP connector and wall support supplied.
- **Operation:**
 - models 792320 and 792330: **2 ~30-second time flow valves** for control of fixed ROUND shower head and handset.
 - models 79239015 and 792380: **2 non-time flow valves** for control of fixed ROUND shower head and handset.
- Concealed fixings.
- Filters and non-return valves.
- Suitable for people with reduced mobility.
- 10-year warranty.

Securitouch shower mixer

Mechanical mixer with pressure-balancing or ceramic cartridge, smooth interior

- **Securitouch thermal insulation prevents burns.**
- Ø 40mm standard ceramic or **pressure-balancing cartridge.**
- Pre-set maximum temperature limiter.
- **Body with smooth interior and low water volume** (reduces bacterial development).
- Flow rate regulated at 9 lpm.
- M^{1/2}" shower outlet with integrated non-return valve.
- Supplied with 2 offset wall connectors M^{1/2}" M^{3/4}" (see page 144).
- Suitable for people with reduced mobility.
- 10-year warranty.

On EP pressure-balancing versions:

- **Anti-scalding safety:** HW flow rate is reduced if CW supply fails.
- Stable temperature regardless of pressure and flow rate variations.
- Filters and non-return valves.

2739EP

Smooth interior
+ low water volume
= very little biofilm
Thermal insulation

Shower kit with auto-draining device:

- Sculptured control lever.
- Shower head with flexible hose and chrome-plated, wall-mounted tilting support.
- **Auto-draining device** FM^{1/2}" automatically drains the flexible and shower head (see page 144).

Shower kit with riser rail:

- Sculptured control lever.
- Sliding shower head on a chrome-plated riser rail with flexible hose and soap dish.
- **Shower hose retaining collar.**

Mechanical shower/shower-bath

Mechanical mixer with pressure-balancing or ceramic cartridge

- Ø 40mm standard ceramic or **pressure-balancing cartridge**.
- Pre-set maximum temperature limiter.
- Flow rate regulated at 9 lpm on the 2239 range.
- **Automatic diverter with low pressure lock** maintains the shower position even if the pressure is too low on model 2252S.
- Sculptured control lever.
- M $\frac{1}{2}$ " outlet with integrated non-return valve.
- Supplied with 2 offset wall connectors M $\frac{1}{2}$ " M $\frac{3}{4}$ " (see page 144).
- Suitable for people with reduced mobility.
- 10-year warranty.

On EP pressure-balancing versions:

- **Anti-scalding safety:** HW flow rate is reduced if CW supply fails.
- Stable temperature regardless of pressure and flow rate variations.
- Filters and non-return valves.

- Shower kit with auto-draining device:**
- Shower head with flexible hose and chrome-plated, wall-mounted tilting support.
 - **Auto-draining device** FM $\frac{1}{2}$ " automatically drains the flexible hose and shower head (see page 144).

- Shower kit with riser rail:**
- Sliding shower head on a chrome-plated riser rail with flexible hose and soap dish.

Options: hydrotherapy accessories (see pages 141 - 143), BIOFIL shower head (see page 142), floor traps (see page 147)

Recessed shower mixer

Mechanical mixer with pressure-balancing or ceramic cartridge in a waterproof housing

- Ø 40mm standard ceramic or **pressure-balancing cartridge**.
- Pre-set maximum temperature limiter.
- Flow rate regulated at 9 lpm (mixer only), 6 lpm at 3 bar with shower head.
- Solid control lever.
- Order a shower head or wall outlet to complete (see opposite and page 145).
- Bright polished stainless steel wall plate 166 × 166mm.
- **Waterproof recessing housing** (see page 113):
 - Collar with waterproof seal.
 - Hydraulic connection from the outside and maintenance from the front.
 - Adjusts to all types of installation (rails, solid walls, panels).
 - Compatible with wall finishes 10 - 120mm (while maintaining the minimum recessing depth of 93mm).
 - Suitable for standard or "pipe-in-pipe" supply.
 - Stopcocks and flow rate adjustment, activation and electronic unit are all integrated and accessible from the front.
 - Supplied in 2 kits: secure system flush without the sensitive elements.
- Suitable for people with reduced mobility.
- 10-year warranty.

On EP pressure-balancing versions:

- **Anti-scalding safety:** HW flow rate is reduced if CW supply fails.
- Stable temperature regardless of pressure and flow rate variations.
- Filters and non-return valves.

254BOX+2541

254CBOX+2551

With pressure-balancing		
Without elbow outlet	254BOX + 2541EP	£290.99 £286.90
With elbow outlet	254CBOX + 2551EP	£324.80 £324.80
With standard ceramic cartridge		
Without elbow outlet	254BOX + 2541	£290.99 £246.30
With elbow outlet	254CBOX + 2551	£324.80 £284.21

Options: fixed shower heads (see opposite), floor traps (see page 147)

Recessed shower mixer

Mechanical mixer with ceramic cartridge

- Mixer with Ø 40mm ceramic cartridge.
- Pre-set maximum temperature limiter.
- Solid control lever.
- Adjustable wall plate Ø 116mm.
- Order a wall-mounted outlet or shower head to complete (see right and page 145).
- Suitable for people with reduced mobility.
- 10-year warranty.

This mixer does not have a waterproof recessing housing. The installer must ensure that the recessing area is waterproof and can drain away any leaks or condensation (see installation guide).

2443

Recessed mechanical shower mixer	2443	£141.50
Options: fixed shower heads (see right), floor traps (see page 147)

Disposable shower kit

With coloured conical unions

Specifically for Healthcare Facilities:

- **Disposable shower kit:** enables regular changing.
- **Flexible hose has smooth interior/exterior:** easy to maintain and reduces bacterial development.
- **Coloured conical unions:** clear visual indication and help to ensure correct shower kit replacement.

809B.25P / 809Y.25P

- 25 white PVC flexible hoses with coloured ABS conical unions: blue or yellow.
- 25 white shower heads \varnothing 70mm, **monojet:** rain-effect.

Disposable shower kits, monojet

25 yellow kits, L. 1.50m	809Y.25P	£242.17
25 blue kits, L. 1.50m	809B.25P	£242.17
25 yellow kits, L. 0.85m	808Y.25P	£236.83
25 blue kits, L. 0.85m	808B.25P	£236.83

Chrome-plated shower kit \varnothing 22mm

With monojet handset

- Chrome-plated cut-to-size stainless steel shower riser rail \varnothing 22mm, overall length 700mm with 590mm centres.
- **Shower head holder can be adjusted in height and tilted.**
- Transparent soap dish.
- Smooth, BICOLOR PVC flexible hose L. 1.50m.
- **Scale-resistant shower head \varnothing 70mm** in chrome-plated ABS, **monojet:** rain-effect.

Shower kit \varnothing 22mm, monojet	801	£75.47
--	------------	---------------

Chrome-plated shower kit \varnothing 25mm

With monojet handset

806

- Chrome-plated cut-to-size stainless steel shower riser rail \varnothing 25mm, overall length 580mm with 540mm centres.
- **Shower head holder can be adjusted in height and tilted.**
- Chrome-plated soap dish.
- Smooth, BICOLOR PVC flexible hose L. 1.50m.
- **Scale-resistant shower head \varnothing 100mm** in chrome-plated ABS, **monojet:** rain-effect.
- **Shower hose retaining collar** (see page 146).

Shower kit \varnothing 25mm, monojet	806	£103.03
--	------------	----------------

Chrome-plated shower kit \varnothing 25mm

With 5-jet handset

803

- Chrome-plated cut-to-size stainless steel shower riser rail \varnothing 25mm, overall length 580mm with 540mm centres.
- **Shower head holder can be adjusted in height and tilted.**
- Chrome-plated soap dish. Smooth, BICOLOR PVC flexible hose L. 1.50m.
- **Scale-resistant shower head \varnothing 100mm** in chrome-plated ABS, **5 jets:** rain-effect, massage, bubble-effect, rain-effect + massage, rain-effect + bubbles.
- **Shower hose retaining collar** (see page 146).

Shower kit \varnothing 25mm, 5 jets	803	£121.64
---	------------	----------------

Chrome-plated shower riser rail Ø 22mm

With soap dish

820

- Chrome-plated cut-to-size stainless steel shower riser rail Ø 22mm, overall rail length 700mm with 590mm centres.
- **Shower head holder can be adjusted in height and tilted.**
- Transparent soap dish.

Chrome-plated shower riser rail Ø 22mm	820	£42.99
--	-----	--------

Chrome-plated shower riser rail Ø 25mm

With soap dish

821

- Chrome-plated cut-to-size stainless steel shower riser rail Ø 25mm, overall rail length 580mm with adjustable centres up to 540mm.
- **Shower head holder can be adjusted in height and tilted.**
- **Shower hose retaining collar** (see page 146).
- Chrome-plated soap-dish.

Chrome-plated shower riser rail Ø 25mm	821	£60.37

STOP/CHECK connectors

Wall-mounted connectors M1/2" M3/4"

- Chrome-plated brass connectors Ø 65mm, L. 62mm for wall-mounted mixers.
- M1/2" M3/4".
- Supplied in packs of 2.
- **Ideal for hospitals.**
- 10-year warranty.

Connectors include:

Manual escutcheon control:

stopcock position and/or non-return valve check.

STOP function:

- Allows isolation of the water supply so that the mixer can be easily removed for descaling, cleaning or maintenance.
- Automatic anti-scalding safety can be checked on SECURITHERM thermostatic and EP pressure-balancing mixers.

CHECK function:

Allows non-return valves to be checked on the respective mixer (DELABIE patent).

Shelf

For shower mixers

- Chrome-plated shelf ideal for dual control thermostatic shower mixers (see ref.s H9768TP, H9769, H9741TP & H9739, pages 118 - 122).
- Body hygiene products can be placed on shelf (shower gel, shampoo, etc.).
- 10-year warranty.

850

Shelf		
	850	£54.13

Extension

For shower panels

- For shower panels.
- Protects the pipework between the top of the shower panel and the ceiling.
- Cut-to-size extension for anodised aluminium versions, adjustable from 350 - 550mm for satin finish stainless steel versions.
- 10-year warranty.

790153

Extension		
Aluminium, W. 210mm, H. 1000mm	790152	£200.70
Stainless steel, W. 218mm	790153	£357.16

Adjustable height floor trap

For tiled or concrete floors

- Flow rate 36 lpm (meets standards).
- Water level 50mm.
- Bright polished stainless steel plate and grid.
- Horizontal outlet Ø 43mm integrated into the height of the floor trap.
- Withstands high temperatures: 60°C continuous, 85°C peak.
- Height adjusts with extension.
- 10-year warranty.

683001UK

Floor trap for tiled or concrete floors		
150 × 150mm, adjustable height up to 70mm	683001UK	£97.86
100 × 100mm, adjustable height up to 80mm	682001UK	£57.59

Floor trap

For tiled or concrete floors

- Flow rate 18 lpm.
- Water level 18mm.
- Brass body 140 × 140mm.
- Bright polished stainless steel grid fixed by a stainless steel screw.
- PVC bell.
- Vertical outlet Ø 40mm (provide elbow for horizontal outlets).
- 10-year warranty.

CONTAMINATION PREVENTION

Non-return valve with integrated backflow prevention device

To prevent any risk of waste water flowing back into the main water supply, DELABIE's controls for bed pan cleaners include a stopcock with an integrated backflow prevention device (a mechanism for replacing foul water with air if there is any backflow) and a non-return valve. There is complete protection against contamination.

Safe installation

To comply with contamination safety regulations, the bed pan cleaner set must be installed so that the nozzle cannot come into contact with the sluice or WC pan (see diagram below).

The stopcock must be connected according to the type of supply:

- for recessed supply, use wall plate ref. 292015.2P for a better aesthetic.
- for exposed supply, use a reinforced connector ref. 841315.

Recommended pressure: minimum 1.5 bar up to 5 bar maximum.

GUARANTEED HYGIENE

DELABIE's hand sprays are specifically designed to deliver a powerful jet without splashing, ensuring thorough cleaning for basins, WC pans and sluices.

BIOSAFE: INFECTION CONTROL

Smooth, opaque flexible hose

The white, reinforced flexible hoses used for the bed pan cleaners are opaque, preventing any development of germs or algae due to the light.

They are also completely smooth (inside and outside) making them easy to clean and reducing bacterial retention.

EASY TO USE

When the stopcock is opened, DELABIE's bed pan cleaner with ceramic discs is primed.

The water flows from the hand spray when the trigger is pressed (standard trigger-operated version), or when the trigger is released (model with inverted trigger). The model with the inverted trigger must be shut off at the stopcock after use to avoid the flexible hose remaining under constant pressure.

AND ALSO...

Ergonomics

The hand spray sleeve and lever are made from reinforced polypropylene and are non-slip for a better grip.

10-year warranty against any manufacturing defects.

INTEGRATED BACKFLOW PREVENTION DEVICE AND NON-RETURN VALVE
Contamination prevention

STOPCOCK
Primes the valve or shuts off the supply in 1/4-turn

DIRECT FLUSH SYSTEMS FOR HEALTHCARE FACILITIES: 7 REASONS TO SAY GOODBYE TO CISTERNS

Not suitable for intensive use, WCs with cisterns were designed for domestic use and are a source of recurring problems in public buildings. Susceptible to scale build-up, they encourage the proliferation of bacteria and pose a permanent risk of leaks when used in public and commercial environments.

Hygiene

Connected directly to the water system, **direct flush operates without the need for a cistern**. Therefore there is no water stagnation which also avoids impurity deposits and bacterial development. Direct flush guarantees **total hygiene**.

DELABIE's electronic flush systems for WCs prevent the spread of germs by hand thanks to their **touch-free control**. Also equipped with a **hygienic duty flush programme**, they renew the water in the pipework if not used for long periods to limit bacterial development.

Available immediately

With direct flush **there is no need to wait** for the cistern to refill before flushing again.

Directly connected to the water system, **the flush is always available, even for successive flushes**. It is therefore, particularly suited to **intensive use** in public places.

Water savings

DELABIE's direct flush WC valves **optimise water consumption**. This system reduces the risk of leaks considerably, unlike cisterns which are the largest source of wasted water and which result in significant water bills.

For example, **a small leak from a cistern can lead to a loss of 220m³ of water** a total cost of £651 per year (cost per m³ for cold water: £2.96, source: Thames Water website thameswater.co.uk).

Therefore, direct flush avoids this unnecessary consumption.

Some DELABIE direct flush systems have a 3L/6L dual flush which can be adjusted to 2L/4L, to meet the requirements of environmental labels.

DELABIE has developed an "automatic intelligent flush" programme which determines the need for a smaller or larger flush volume depending on use. This allows the correct consumption of water according to need and **avoids waste** while guaranteeing optimal cleanliness.

Limited and simplified maintenance

Designed for domestic use, cisterns have fragile mechanisms. Conversely, direct flush systems are **specifically designed for public and commercial places**. Perfectly able to withstand intensive use as well as vandalism, they are essential for public washrooms.

DELABIE's mechanisms are **extremely robust**. Subjected to endurance tests, they are able to withstand over **500,000 operations**. The battery lifespan, for battery-operated versions, is 3 to 6 years depending on the frequency of use, i.e. approximately **350,000 uses**.

Maintenance on DELABIE products is, therefore, **infrequent** and is also **easy to undertake**. Maintenance access is from the front.

Space saving

Thanks to the **absence of a cistern**, direct flush allows **significant space saving**. DELABIE's frame systems are also very compact, which is a real advantage for buildings seeking to optimise space.

Efficiency

Connected directly to the water system, direct flush **uses the system's water pressure** to flush the WC pan. As a result, the **flush is more powerful and more effective** compared to a cistern flush. Direct flush guarantees optimum cleanliness.

Wide, design-led range

At DELABIE, aesthetics play a major role in product development. The design must be able to **adapt to any type of environment**, as well as being both durable and reliable. This is why DELABIE offers a **wide range of WC valves**: electronic, time flow, exposed, recessed, cross wall and with or without a frame system.

Developed specifically for use in public places, and adapted to new environmental regulations, **the direct flush system provides the best balance between quality, durability and price for this type of environment**.

Environmental labels

Aware that new consumption trends linked to eco-responsibility issues have a major impact on public places, such as the service sector, DELABIE has designed a **range of direct flush systems which allow optimised water consumption** and which are also eligible for the highest levels of ecological accreditation such as BREEAM, LEED and HQE.

By removing the cistern, the primary source of leaks in WCs, direct flush also reduces the waste of cold water.

SIZING HORIZONTAL FINAL PIPEWORK

DTU update (August 2013)

Simultaneous use

The DTU (*Unified Technical Document*) confirms the **special calculation method for direct flush valves**.

The operating time is very short (a few seconds) and there is no refill time.

So calculations for pipe diameters for direct flush systems are not made in the same way as for cistern flush systems.

The DTU recommends the following method for direct flush valves:

Number of valves installed	Number of valves used simultaneously
3 valves	1 valve
4 - 12 valves	2 valves
13 - 24 valves	3 valves
25 - 50 valves	4 valves
> 50 valves	5 valves

DIRECT FLUSH SYSTEMS: A RAPID RETURN ON INVESTMENT

WCs with cisterns are still often installed in public places, in particular, because the initial investment may seem lower. However, the initial saving ultimately turns out to be very costly, very quickly.

The many advantages of the WC direct flush system - improved hygiene, fewer leaks, water savings, reduced maintenance and easy servicing - very quickly make the product better value.

By switching to a direct flush system, gains can be made on several levels:

- **Fewer water leaks** (which can equate to 220m³ per year per WC).
- **Fewer maintenance interventions:** there are multiple components that need to be changed regularly on cistern-flush systems such as: fragile mechanisms which cannot withstand scale, control plates that break since they are not designed for intensive use or vandalism, etc.
Direct flush valves are equipped with scale and shock-resistant mechanisms with 10-year warranties.
- **Less labour is required** to repair leaks or carry out maintenance.

Many retirement homes, care facilities, etc. are currently fitted with cistern-flush WCs, because these facilities are associated with a residential setting. However, even if the users are resident for long periods, they are still **public buildings** with the same needs as any other public building: water savings, resistance to frequent use, easy to install and maintain, etc.

Example: a retirement home with 300 beds.

With cistern-flush WCs installed:

- Mechanisms require changing every 3 years
- 2 hours of maintenance required per day to repair leaking cisterns.

Replacing cistern-flush WCs by a direct flush system:

ADVANTAGES OF DIRECT FLUSH

Hygiene

- The flush connects directly to the water system.
- No cistern: no water stagnation or bacterial development.
- Flushes automatically, without manual contact.
- Pipework flushes daily to prevent bacterial proliferation in the water system.

Water savings

- Thanks to the direct connection onto the pipework without any intermediary, there is no need for a fragile mechanism.
- The risk of leaks is greatly reduced with this system.
- On electronic versions, an intelligent flush programme determines the optimal flush volume for perfect cleaning and reduced water consumption.

Immediate availability

- Possible to use for successive flushes without having to wait between 2 uses.
- An essential feature for periods of high traffic.

Limited and simplified maintenance

- Specifically designed for frequent use, direct flush mechanisms are durable (up to 500,000 operations) and resistant (scale-resistant mechanisms).
- Maintenance is, therefore, infrequent and the mechanism is easy to access from the front when necessary.
- 10-year warranty.

Powerful and effective flush

- Uses the pressure in the pipework to rinse the pan.
- Thanks to the powerful flush, cleaning is effective and guarantees a clean WC pan.

Space saving

- With no cistern, the frame systems with direct flush valves are more compact and can save several m² in a building.
- This space saving can optimise the profitability of a project when the price per m² is high.

DISADVANTAGES OF CISTERN-FLUSH

Hygiene problems

- Cistern: up to 9L of stagnant water at an ambient temperature which encourages bacterial development.
- Bacteria can spread throughout the hydraulic installation.
- Bacteria can be projected through the air via the flush plume and inhaled by the user.

Leaks and overconsumption of water

- Plastic mechanisms inside the tank are constantly submerged and, therefore, sensitive to scale build-up.
- They are the cause of frequent water leaks which are often invisible and inaudible and therefore detected late.
- Cisterns are the main source of wasted drinking water. For example, a small leak from a cistern can cause a loss of 220m³ of water that equates to £651 per year.

Waiting time

- The cistern has to refill between each use, which may take up to 1 minute.
- In the event of a leak (even minimal), the tank may fail to fill and cause inconvenience and lead to vandalism by users.
- Successive flushes are not possible.

Frequent maintenance and difficult to access

- Not designed for intensive use, the cistern's fragile mechanism is not very durable and must be changed regularly.
- Dismantling and access to the mechanism is difficult, and the bottom of the cistern remains inaccessible.
- Control plates need to be replaced frequently to compensate for careless use in public places.

Ineffective flush

- The water drop between the cistern and the WC pan is only a few centimetres.
- The flush force is not powerful enough for effective cleaning.

Large footprint

- Frame systems with cisterns take up more space and use more floor space.

WHAT ARE THE ADVANTAGES OF A TEMPOFIX 3 FRAME SYSTEM?

Easy to clean

Self-supporting TEMPOFIX 3

Wall-mounted TEMPOFIX 3

TEMPOFIX 3 for thick walls

Easy to install

Installation and commissioning time should be taken into account when determining the total product cost, especially when installing a large number of products in public and commercial places.

The TEMPOFIX 3 frame system is delivered pre-mounted. The remaining components (flush tube, housing and soil pipe) are assembled by clipping into place. It is quick and easy to install.

When fixing the self-supporting TEMPOFIX 3 version of the frame system, the floor quality is the main criteria: the concrete floor should withstand a minimum load of 350kg/m³.

It is possible to install on non-load bearing floors (parquet, floors with underfloor heating, etc.) thanks to the wall-mounted model which is fixed to load-bearing walls.

DELABIE recommends a 25mm minimum wall thickness + tiling (= 2 x 1/2" wall boards or 1 x 1" wall board).

Easy to adjust

Adjusting the pan height is simple: a mark indicates the "1-metre" point from the finished floor level on the frame system.

Vandal-resistant

The structure of DELABIE's frame system is made from powder-coated steel. Its design provides it with an unrivalled resistance to deformation.

The French standard NF D12-208 requires that frame systems flex no more than 5mm when subjected to a uniformly distributed load of 400kg. The TEMPOFIX 3 withstands 400kg loads and therefore meets this requirement.

It is delivered with large stable feet (for self-supporting installation) or with wall fixings (for wall-mounted installation).

Optimised for stocking

Reduced frame weight and product packaging save space for storage and are an advantage for being kept on construction sites.

Advantages of wall-hung WCs

The height of the pan can be adjusted to suit the needs of the user, from children to people with reduced mobility.

A wall-hung WC allows easy access to clean the floor below the WC pan.

Space saving

On average the TEMPOFIX 3 takes up 30% less space than other frame systems on the market. It is one of the most compact frame systems.

With no need for a cistern, it can be installed in the tightest of places such as service ducts.

The wall-anchoring bolts enable two TEMPOFIX 3 to be fixed back-to-back in a communal service duct (in Ladies and Gents toilets) without the need for a partition wall.

Products suited to the needs of healthcare facilities

Increasingly in public places, plasterboard walls are being replaced by gypsum blocks, brick, or even cinder blocks in order to improve the durability of the installations.

The TEMPOFIX 3, equipped with a new waterproof recessing housing, functions electronically (TEMPOMATIC dual control) or with timed flow (TEMPOFLUX 3), and the one model can adjust to any type of wall finish from 10 - 120mm.

DELABIE has also developed its range of TEMPOFLUX 2 direct flush valves, offering extended versions of the valves and frames so that they can be adjusted to thicker walls up to 130mm.

Such an innovative installation would prove difficult to achieve with cisterns.

A SINGLE PRODUCT for wall thicknesses from 10 - 120mm

1 METRE MARK FROM FINISHED FLOOR LEVEL
Easy to install

HOUSING FIXED BY CLIPS
Quick and easy to install

SPACE SAVING
350 x 180mm

LARGE SELF-SUPPORTING FEET

TEMPOMATIC DUAL CONTROL RECESSED: 100% WATERPROOF RECESSED HOUSING, MODULAR AND ADAPTABLE

Modular

Attachable from the sides, front or behind, DELABIE's recessed housing can be used on **plasterboard rails**, on **load-bearing walls** or even **thin panels**, the installation is therefore modular, adapting to the type of project.

Plasterboard rails

Load-bearing walls

Panels

Adaptable

It is the ideal positioning of the collar that enables the housing to be cut to size lengthwise depending on the wall thickness whilst still guaranteeing complete waterproofing. **Thin or thick, the housing adapts to all the requirements of walls from 10 to 120mm.**

Thick wall finish
Max. 120mm

Narrow wall finish
Min. 10mm

Quick and easy to install

The TEMPOMATIC dual control can be connected to standard pipes or "pipe-in-pipe". The hydraulic connection is made from the outside of the housing. During installation, the electronic unit is replaced by a temporary cap to **flush the system safely**, without damaging the technical elements.

Electronic unit

Temporary cap

Water savings

DELABIE has developed an **"intelligent" rinse function** in the automatic mode. The system can distinguish between the need for a short rinse (2 to 3 litres) or a longer flush (4 to 6 litres).

100% waterproof

Standard housings on the market are designed to be cut to size flush to the wall, which increases the risk of leaks between the wall and the collar.

DELABIE's recessed housing is equipped with a collar with an **integrated seal**, that clips onto the housing once the wall finish is in place (patented system). **It is completely waterproof without silicone.** Any condensation is evacuated via the plate. **The wall stays intact throughout.**

Collar with integrated waterproof seal

Resistant to intensive use and vandalism

The control plate, made from satin stainless steel, will withstand even the most extreme handling. Its fixings are concealed and its streamlined design discourages any attempt to pull it off. To prevent abuse or waste in the voluntary mode, the TEMPOMATIC dual control is fitted with an **AB anti-blocking system**. This security feature prevents the valve from being blocked in the open position. The flush takes place only when the push-button is released.

Minimal servicing and simple to maintain

Maintenance is carried out from the front by simply removing the control plate. The technical elements are accessible and the loose parts come **pre-assembled**.

An **LED** indicates when the **batteries need to be replaced**. Integrated in the plate, they can be replaced **without cutting off the water or removing the valve**.

The **vacuum breaker** is located inside the housing.

In case of backflow, the water will evacuate in front of the wall via the housing, and not behind (or into) the wall.

The TEMPOMATIC dual control is suitable for grey water, rain water and sea water.

Making protection from frost and in-depth maintenance easier, **the valve can be disconnected and removed from the inside**, without removing the housing.

Hygiene

The TEMPOMATIC dual control **flush** can be activated voluntarily by the push-button, or failing that, **automatically when the user leaves**. This dual control guarantees **permanent hygiene for the WC pan**, even if the user forgets or neglects to flush the WC. The **duty flush** prevents bacterial proliferation and ensures that the pipework is flushed every 24 hours when not in use.

Design

The TEMPOMATIC dual control flush plate has a **timeless design**, available in satin finish stainless steel with a chrome-plated metal push-button.

Thanks to its **sleek lines**, it fits perfectly in any type of public building. Its smooth surface limits the build-up of dirt and facilitates cleaning. This new concept combines **design and functionality**: the electronics are integrated directly in the control plate.

WATERPROOF HYDRAULIC CONNECTION
Standard pipe or "pipe-in-pipe"

FINS CAN BE ADJUSTED ACCORDING TO INSTALLATION TYPE
Easy to install

NOTCHES TO CLIP AND FIX COLLAR ONTO (patented)

TEMPOMATIC WC dual control

Recessed electronic WC flush system

- **Direct flush system without cistern:** directly connected to pipework.
- **Battery-operated with CR123 6V Lithium batteries** or **230/6V mains supply** (cable and transformer supplied).
- **Satin stainless steel control plate 186 × 186mm** and chrome-plated metal button **with integrated electronics.**
- **Waterproof recessing housing:**
 - Collar with waterproof seal.
 - Hydraulic connection from the outside and maintenance from the front.
 - Adjusts to all types of installation (rails, solid walls, panels).
 - Compatible with wall finishes 10 - 120mm (while maintaining the minimum recessing depth of 93mm).
 - Suitable for standard or "pipe-in-pipe" supply.
 - Stopcock and flow rate adjustment, activation and electronic unit are all integrated and accessible from the front.
 - TEMPOMATIC F^{3/4}" flush valve is compatible with sea water, rain water and grey water.
 - Vacuum breaker inside the housing.
 - Supplied in 2 kits: secure system flush without sensitive elements.
- Shock-resistant infrared presence detection sensor.
- **Detection delay is 10 seconds.**
- **Touch-free automatic activation** when the user leaves or **voluntary touch-free activation** (anti-blocking push-button).
- Independent push-button: the flush will activate even if the power supply fails.
- **"Intelligent" automatic rinsing:** flush volume adapts according to use.
- **3 programmes** (rinse volume can be set according to type of WC pan).
- **Hygienic duty flush**, every 24 hours (can be adjusted to 12 hours or OFF) after the last use.
- Outlet connection for PVC tube Ø 26/32mm.
- Base flow rate: 1 L/sec. at 1 bar dynamic pressure.
- Suitable for rimless WC pans without flow rate regulation and suitable for people with reduced mobility.
- 10-year warranty.

464PBOX + 464006

TEMPOMATIC recessed WC dual control flush valve in a waterproof housing

6V battery-operated	464PBOX + 464006	£171.50 £543.08
230/6V mains supply	464SBOX + 464000	£171.50 £571.66

Wall-mounted model - 230/6V mains supply	564000DE + 464000	£435.89 £571.66

Options: wall fixings, sleeve connector and connection kit for disabled WC (see page 180)

TEMPOMATIC

Cross wall electronic WC flush valve

- **Flush system without cistern:** directly connected to pipework.
- Mains supply with 1" solenoid valve.
- 230/12V transformer.
- IP65 independent electronic unit.
- **For cross wall installation.**
- Shock-resistant infrared presence detection sensor.
- **Touch-free automatic activation** when the user leaves or **voluntary touch-free activation** (when hand is moved 4cm from the sensor).
- **Time flow ~7 seconds**, can be adjusted from 3 - 12 seconds.
- **Detection distance, flow rate and flush volume can be adjusted.**
- Stopcock FF1".
- Vacuum breaker Ø 32mm.
- Connection washer Ø 32/55mm.
- Wall plate flush to the wall.
- Threaded rod can be cut to size.
- Base flow rate: 1 L/sec at 1 bar dynamic pressure.
- Compatible with rain water.
- Suitable for rimless pans without flow rate regulation and suitable for people with reduced mobility.
- 10-year warranty.

WCs - FRAMES

TEMPOFLUX 3 RECESSED: 100% WATERPROOF RECESSED HOUSING, MODULAR AND ADAPTABLE

Modular

Attachable from the sides, front or behind, DELABIE's recessed housing can be used on [plasterboard rails](#), on [load-bearing walls](#) or even [thin panels](#), the installation is therefore modular, adapting to the type of project.

Adaptable

It is the ideal positioning of the collar that enables the housing to be cut to size lengthwise depending on the wall thickness whilst still guaranteeing complete waterproofing. [Thin or thick, the housing adapts to all the requirements of walls from 10 to 120mm.](#)

Quick and easy to install

The TEMPOFLUX 3 can be connected to standard pipes or "pipe-in-pipe". The hydraulic connection is made from the outside of the housing.

During installation, the cartridge is replaced by a temporary cap to [flush the system safely](#), without damaging the technical elements.

Water savings

The TEMPOFLUX 3 with [3L/6L dual flush](#) optimises flushing and water consumption. The flush volume can be adjusted to [2L/4L](#), to achieve the highest standards for environmental labels.

For more information see page 215.

The [AB anti-blocking device](#) controls the flush volume regardless of how long the push-button is pressed for.

100% waterproof

Standard housings on the market are designed to be cut to size flush to the wall, which increases the risk of leaks between the wall and the collar.

DELABIE's recessed housing is equipped with a collar with an [integrated seal](#), that clips onto the housing once the wall finish is in place (patented system).

[It is completely waterproof without silicone.](#) Any condensation is evacuated via the flush plate. [The wall stays intact throughout.](#)

Resistant to intensive use and vandalism

The control plate will withstand even the most extreme handling. Its fixings are concealed and its streamlined design discourages any attempt to pull it off. To prevent abuse or waste, the TEMPOFLUX 3 is fitted with an [AB anti-blocking system](#).

This security feature prevents the valve from being blocked in the open position. The flush takes place only when the push-button is released.

Minimal servicing and simple to maintain

[Maintenance is carried out from the front](#) by simply removing the control plate. The technical elements are accessible and the loose parts come [pre-assembled](#).

The flush volume can be adjusted directly behind the control plate, without shutting off the water supply or removing the valve.

The [vacuum breaker](#) is located inside the housing.

In case of backflow, the water will evacuate in front of the wall via the housing, and not behind (or into) the wall.

The TEMPOFLUX 3 is suitable for grey water, rain water and sea water.

Making protection from frost and in-depth maintenance easier, [the valve can be disconnected and removed from the inside](#), without removing the housing.

Comfort

Thanks to its [soft-touch operation](#), the TEMPOFLUX 3 can be used by all users (children, the elderly or people with reduced mobility).

The [acoustic level is low](#) and complies with European standard EN 12541 class II.

Design

The TEMPOFLUX 3's control plate has a [timeless design](#) available in 2 finishes: [satin stainless steel](#) or [chrome-plated metal](#).

Thanks to its sleek lines, it fits perfectly in any type of public building. Its smooth surface limits the build-up of dirt and facilitates cleaning.

Recessed time flow direct flush valve for WCs

- **Flush system without cistern:** directly connected to pipework.
- **Chrome-plated metal control plate 170 × 170mm or satin stainless steel 210 × 162mm.**
- **Waterproof recessing housing:**
 - Collar with waterproof seal.
 - Hydraulic connection from the outside and maintenance from the front.
 - Adjusts to all types of installation (rails, solid walls, panels).
 - Compatible with wall finishes 10 - 120mm (while maintaining the minimum recessing depth of 93mm).
 - Suitable for standard or "pipe-in-pipe" supply.
 - Stopcock and flow rate adjustment, activation unit and cartridge are all integrated and accessible from the front.
 - TEMPOFLUX 3 F^{3/4}" flush valve is compatible with sea water, rain water and grey water.
 - Vacuum breaker inside the housing.
 - Supplied in 2 kits: secure system flush without sensitive elements.
- **Soft-touch operation.**
- **AB anti-blocking system:** water only flows when the push-button is released.
- **Dual flush 3L/6L, can be adjusted to 2L/4L** or single flush 6L.
- Outlet connection for PVC tube Ø 26/32mm.
- Acoustic level complies with European standard EN 12541 class II.
- Base flow rate: 1 L/sec. at 1 bar dynamic pressure.
- Suitable for rimless WC pans without flow rate regulation and suitable for people with reduced mobility.
- 10-year warranty.

TEMPOFLUX 3 AB WC remote

Recessed time flow flush valve

- **Flush system without cistern:** directly connected to pipework.
- **Wall plate** in satin stainless steel 186 × 186mm.
- **Time flow control plate** in satin stainless steel 90 × 90mm with chrome-plated push-button.
- **Waterproof recessing housing:**
 - Collar with waterproof seal.
 - Hydraulic connection from the outside and maintenance from the front.
 - Adjusts to all types of installation (rails, solid walls, panels).
 - Compatible with wall finishes 10 - 120mm (while maintaining the minimum recessing depth of 93mm).
 - Suitable for standard or "pipe-in-pipe" supply.
 - Stopcock and flow rate adjustment, filter and cartridge are integrated and accessible from the front.
 - TEMPOFLUX 3 F^{3/4}" flush valve is compatible with sea water, rain water and grey water.
 - Vacuum breaker inside the housing.
- **Soft-touch operation.**
- **AB anti-blocking system:** water only flows when the push-button is released.
- **Dual flush 3L/6L, can be adjusted to 2L/4L.**
- Outlet connection for PVC tube Ø 26/32mm.
- Acoustic level complies with European standard EN 12541 class II.
- Base flow rate: 1 L/sec. at 1 bar dynamic pressure.
- Suitable for rimless pans without flow rate regulation and suitable for people with reduced mobility.
- 10-year warranty.

TEMPOFLUX 3 AB WC remote	763300	£426.31

TEMPOFIX 3 with TEMPOFLUX 3

Fire retardant frame system with time flow direct flush valve for WCs

- Black powder-coated self-supporting steel frame with large feet for load-bearing floors.
- **Fire retardant 60 minutes** (tested according to ISO 834).
- Frame height can be adjusted from 0 - 200mm (with 1m mark).
- Ø 32mm flush tube with Ø 55mm connection washer.
- ABS soil pipe with HDPE sleeve connectors, Ø 110mm outlet with waterproof seal, with 2 setting positions.
- Delivered pre-mounted.
- **Compatible with solid walls from 53 to 105mm** (4 BA13 and tiles minimum).
- 10-year warranty.

Fitted with TEMPOFLUX 3 WC F^{3/4}" time flow direct flush valve:

- Satin stainless steel control plate 210 × 162mm.
- Waterproof recessing housing with tumescent collar and fire protection set.
- **Soft-touch operation.**
- **Dual flush 3L/6L, can be adjusted to 2L/4L.**
- **AB anti-blocking system.**
- Vacuum breaker inside the housing.
- Integrated stopcock and flow rate adjuster.
- Acoustic level complies with European standard EN 12541 class II.
- Compatible with sea water, rain water and grey water.
- Suitable for people with reduced mobility.

TEMPOFIX 3 self-supporting fire retardant frame system with TEMPOFLUX 3 WC  565065DE + 763000 £767.79
£171.50

Options: wall fixings, sleeve connector and kit for disabled WC (see page 180)

565065DE + 763000

TEMPOFLUX 2 WC

Recessed time flow flush valve

- **Flush system without cistern:** directly connected to pipework.
- Chrome-plated metal wall plate Ø 195mm.
- Multipurpose recessing housing.
- Recessing depth can be adjusted 0 - 20mm.
- **Available with 6L single flush or 3L/6L dual flush** can be adjusted to 2L/4L.
- **Soft-touch operation.**
- **Vacuum breaker.**
- **Integrated stopcock and flow rate/flush volume adjuster.**
- Solid brass body.
- Chrome-plated metal push-button.
- In-line inlet M $\frac{3}{4}$ ".
- Outlet connection for PVC tube Ø 26/32mm.
- **Acoustic level complies with European standard EN 12541 class II.**
- Base flow rate: 1 L/sec. at 1 bar dynamic pressure.
- Compatible with sea water, rain water and grey water.
- Suitable for rimless WC pans without flow rate regulation and suitable for people with reduced mobility.
- 10-year warranty.

This model does not have a waterproof recessing housing.
The installer must ensure that the recessing area is waterproof and any leaks or condensation can drain away (see installation guide).

SXS mechanical hand washbasin

Knee-operated

- Wall-mounted, knee-operated hand washbasin.
- Bacteriostatic 304 stainless steel.
- Stainless steel thickness: 0.8mm.
- Rounded edges prevent injury.
- Available with or without splashback.
- Bare model (without tap) or complete model (with tap and pre-mixer).
- Complete model consists of: swan neck spout, soft-touch time flow tap with 7-second time flow and a pre-mixer with non-return valves.
- Flat perforated waste, without screws: easy to clean and vandal-resistant.
- Water savings: flow rate pre-set at 3 lpm.
- Maximum hygiene: no manual contact with tap.
- Without overflow.
- Supplied with fixing elements.
- CE marked. Complies with European standard EN 14688.
- Weight: 4.3kg.
- 10-year warranty.

Option: soap dispensers (see page 96)

SXS electronic hand washbasin

Electronic control

- Wall-mounted hand washbasin with electronic control.
- Bacteriostatic 304 stainless steel.
- Stainless steel thickness: 1.2mm.
- Rounded edges prevent injury.
- Available with or without splashback.
- Supplied with a WRAS approved electronic tap with integrated batteries and solenoid valve, a TMV3 and WRAS approved thermostatic mixing valve and a chrome-plated brass soap or hydroalcoholic gel dispenser.
- Supplied with 1 1/4" waste. Without overflow.
- Water savings: flow rate pre-set at 3 lpm.
- Maximum hygiene: no manual contact with tap, reduced-stagnation solenoid valve, duty flush prevents bacterial development.
- Supplied with fixing elements.
- CE marked. Complies with European standard EN 14688.
- Weight: 4.1kg.
- 10-year warranty.

FRAJU PMR washbasin

Wall-mounted

- Wall-mounted washbasin, 620 × 505mm.
- Bacteriostatic 304 stainless steel.
- Stainless steel thickness: 1.2mm for the bowl and 1.5mm for surround.
- Rounded edges prevent injury.
- Supplied with 1¼" waste.
- Without overflow.
- Supplied with fixing elements.
- CE marked. Complies with European standard EN 14688.
- Weight: 5kg.
- 10-year warranty.

120440

MINERALCAST PMR washbasin

Wall-mounted

- Wall-mounted washbasin, 785 × 545 × 170mm.
- With integral side grips which can be used as a support or a towel holder.
- MINERALCAST: composite material consisting of natural minerals and polyester resin.
- Shallow washbasin.
- Uniform, non-porous surface is easy to clean.
- One-piece cast washbasin, seam-free, for easy maintenance and better hygiene.
- Warm to the touch.
- Without overflow.
- Supplied with fixing elements.
- White, RAL 9016.
- CE marked. Complies with European standard EN 14688.
- Weight: 21.5kg.
- 10-year warranty.

SAFETY CONTROLS: SPECIFICALLY DESIGNED FOR RAPID DECONTAMINATION

In order to address the risk of contamination to the body, face and/or eyes posed by harmful chemicals, DELABIE has developed a range of safety controls. DELABIE's safety showers and eye wash stations provide users with an **efficient decontamination** facility at the site of the incident, especially during the initial treatment phase.

Optimised rinsing for eyes

Safety

The shower head with spray diffuser ensures an optimised spray for the whole body. The diameter and orientation of the diffuser ensures an **even, conical flow**.

The spray heads are fitted with aerators and stainless steel double filters to prevent any solid particles in the water pipes coming into contact with the eyes. Protective caps prevent dust and other airborne contaminants entering the valve. The controls are easy to access.

Frost-free system comes as standard

Reliable

DELABIE's safety controls are fitted with **frost-free mechanisms as standard** (see below). They are made from corrosion-resistant materials.

Frost-free system as standard

Most safety equipment is installed outside or in buildings that are not heated. DELABIE's safety controls are fitted with frost-free systems as standard and can be installed inside or outside buildings. The frost-free system ensures that the riser column and shower head will deliver a proper spray with every use (see below). The upstream supply pipework must also be protected from freezing temperatures.

Efficient

DELABIE's safety controls deliver large flow rates which ensure rapid decontamination:

- Eye wash stations: flow rate 20 lpm at 3 bar dynamic pressure.
- Showers: flow rate 70 lpm at 3 bar dynamic pressure.

The diameter and position of the 74 holes in the shower head are designed for optimised rinsing.

User comfort

The protective caps eject automatically with the pressure when the equipment is activated. The spray heads are fitted with aerators which ensure a **gentle spray** to avoid further injury to the user.

Quick to install

DELABIE's safety controls are quick and easy to install. A mixed, potable water supply should be considered (DELABIE recommends installing a thermostatic mixing valve depending on the nature and flow rate of the equipment, see the DELABIE "Commercial Water Controls" catalogue DOC 609 UK. So that the location of the safety controls can be easily identified, green identification signs are supplied with each item.

Easy to operate

DELABIE's safety controls are designed to be **quick and easy to operate**. Water flows when the triangular handle is pulled, the foot pedal is pressed or the hand control is pulled towards the user.

Compliance

DELABIE's safety controls comply with the following European standards:

- Safety showers: European standard EN15154-1.
- Eye wash stations: European standard EN15154-2.
- Identification signs: International standard ISO 3864-1 covering graphic symbols, safety colours and safety signs in the work place and public places. This standard is included in the European directive 92/58/CEE and at an international level by ISO 3864-1.

AND ALSO...

Easy to maintain

Standard parts **can be replaced without dismantling the equipment**. Maintenance staff can change the parts quickly and easily. The equipment must be checked every 15 days to ensure that it is in good working order.

10-year warranty against any manufacturing defect.

Eye wash and shower combination

Free-standing

- Frost-free system as standard.
- 304 stainless steel basin Ø 250mm with green finish.
- Eye wash spray heads fitted with protective caps in shock-resistant, green ABS. Caps eject automatically when eye wash is activated.
- Flow rate 20 lpm at 3 bar dynamic pressure, aerators with stainless steel double filters.
- Circular shower head Ø 250mm in green, shock-resistant ABS.
- Flow rate 70 lpm at 3 bar dynamic pressure.
- Water supply F1".
- Pipes made from galvanised steel, grey powder-coated finish.
- Triangular pull handle in green powder-coated brass.
- Hand and foot controls in green powder-coated galvanised steel.
- Fixed to the floor by a brass plate (screws not included).
- Supplied with identification signs for first aid equipment: "Safety Shower" and "Safety Eye Wash".
- 10-year warranty.

Operation:

¼-turn, nickel-plated brass valves open and close quickly.

Simultaneous eye wash and shower:

- Water flows simply by pulling on the triangular handle.
- The flow will continue even when the handle is released.
- The flow will stop when the handle is returned to its original position.

Eye wash only:

- Water flow is operated by the foot pedal or the hand control.
- The eye wash will continue to flow when the pedal or hand control is released.
- The water flow will stop when the hand control is pulled towards the user or the foot pedal is raised.

The water does not shut off automatically, allowing the injured person to have both hands free (to remove their clothing, keep their eyes open, etc.).

9203

Eye wash and shower combination	9203	£1,065.38
<i>We recommend installing a TMV (see Commercial Water Controls catalogue)</i>		

Wall-mounted recessed safety shower

Horizontal model with manual control

- Frost-free system as standard.
- Circular shower head Ø 250mm in green, shock-resistant ABS.
- ¼-turn, nickel-plated brass valve opens and closes quickly.
- Water flows simply by pulling on the triangular handle.
- The flow will continue even when the handle is released.
- The flow will stop when the handle is returned to its original position.
- Flow rate 70 lpm at 3 bar dynamic pressure.
- Water supply F1".
- Pipes made from galvanised steel, grey powder-coated finish. Triangular pull handle in green powder-coated brass.
- Supplied with identification sign for first aid equipment: "Safety Shower".
- For cross wall installation, with recessed supply, or for mounting on a false ceiling (we recommend a 1" mounting bracket).
- 10-year warranty.

Wall-mounted safety shower	9108	£219.54
-----------------------------------	-------------	----------------

We recommend installing a TMV (see Commercial Water Controls catalogue)

Eye wash station

Manual and pedal control

- Eye wash station fitted with frost-free system as standard.
- Green powder-coated 304 stainless steel basin Ø 250mm.
- Eye wash spray heads fitted with protective caps in green ABS; will eject automatically when activated.
- ¼-turn, nickel-plated brass valves open and close quickly.
- 10-year warranty.

Operation:

- Model 9201: water flows when pedal or manual control is pushed.
 - Model 9102: water flows when manual control is pushed.
- The eye wash will continue to operate when the pedal or manual control is released.
- The water will stop when the manual control is pulled towards the user and the foot pedal is raised on the free-standing model.
 - Flow rate 20 lpm at 3 bar dynamic pressure, aerators with stainless steel double filters.
 - Pipes made from galvanised steel, powder-coated grey finish.
 - Pedal and manual controls in green powder-coated galvanised steel.
 - Fixed to the floor by a brass plate (screws not included).
 - Supplied with identification sign for first aid equipment: "Safety Eye Wash".

Trigger-operated eye wash - dual/single spray

Trigger-operated

- Eye wash spray heads fitted with protective caps in green ABS; will eject automatically when activated.
- Press the trigger to operate eye wash spray.
- A spring automatically shuts off spray.
- Aerators with stainless steel double filters.
- Ergonomic grip and trigger in green polypropylene.
- Supplied with identification sign for first aid equipment: "Safety Eye Wash".
- 10-year warranty.

Trigger-operated eye wash - dual spray - 9 lpm flow rate		
Wall-mounted with flexible and support L. 1.50m 15 × 100 ½"	9121	£216.53
Deck-mounted, flexible L. 1.50m 15 × 100 ½"	9141	£268.33

**WATER REGULATIONS
ADVISORY SERVICE**

All sanitary fittings that deliver water from a public mains water supply must comply with the Water Supply (Water Fittings) Regulations (1999) or Scottish Byelaws.

These fittings must be of an 'appropriate quality and standard' and must not contaminate the water or cause wastage.

Products that are WRAS approved demonstrate this compliance and are recognised by all water suppliers in the UK.

TMV3 SCHEME

The TMV scheme, administered by NSF International, certifies that TMV3-designated thermostatic mixing valves (TMVs) conform to performance requirements of D08 for valves used in high-risk areas of healthcare premises. The Department of Health's HTM 04-01 specifies that Type 3 valves must comply with D08 requirements.

TMV2-designated thermostatic mixing valves are compliant with BS EN 1111 (high pressure) and/or 1287:1999 (low pressure), as required by UK Building Regulations Part G to reduce the risk of scalding in domestic or other domestic type situations.

DELABIE AND SANITARY FITTING COMPLIANCE IN HEALTHCARE FACILITIES

In recent years, the Department of Health & Social Care has issued various guidance for Sanitary Provision in healthcare facilities. The aim is to ensure appropriate solutions for the intended use. DELABIE's sanitary fittings have been specifically designed to be fit-for-purpose in specialist healthcare environments and to comply with current guidance.

Health Technical Memorandum 04-01: Safe water in healthcare premises

HTM 04-01 Parts A – C (2016), and the Supplement (2016) for TMV performance specification, provide guidance for the design, installation, commissioning and operational management for the provision of safe water, with a specific focus on infection control and anti-scalding measures.

This supplements the Health and Safety Executive guidance HSG274 for legionella control in hot and cold water systems.

Health Technical Memorandum 07-04: Water management and water efficiency – best practice advice for the healthcare sector (2013)

HTM 07-04 encourages the efficient management of water in healthcare facilities and highlights the economic and environmental benefits of self-closing/sensor taps, dual flush WCs and controlled-flush urinals in the appropriate environments (for more information about our urinal solutions see our Commercial Water Controls catalogue DOC 609 UK).

Health Building Note 00-02: Sanitary spaces (Published 2013, updated 2016)

HBN 00-02 provides best practice guidance on the design and layout of sanitary spaces for use in healthcare settings and enhances Approved DOC M accessibility provision.

Health Building Note 00-09: Infection control in the built environment (2013)

HBN 00-09 advocates the application of design principles to encourage desired behaviour to promote patient safety and comfort, prevent contamination and facilitate cleanliness.

Health Building Note 00-10: Part C: Sanitary Assemblies (2013)

HBN 00-10 outlines essential quality and safety standards that sanitary assemblies must comply with.

Particular consideration is given to: infection prevention and control; patient safety; product standardisation, sustainability and life-cycle management; cleaning regimes and maintenance costs.

BS 8580-1:2019 Water quality. Risk assessments for Legionella control (Published 2010, updated 2019)

BS 8580-1 acts as a code of practice with recommendations and guidance for assessing the risk of Legionnaire's disease associated with man-made water systems. Recently updated to ensure it aligns with HSG 274 among other Legionella guidance documents.

BS 8580-2:2022 Water quality. Risk assessments for Pseudomonas aeruginosa and other waterborne pathogens (2022)

BS 8580-2 provides detailed guidance on assessing the risks posed by P. aeruginosa in healthcare settings, and the implications for duty holders, responsible persons and the Water Safety Group.

ECAU/EChAU classification for mixers:

There are 4 basic characteristics and the letters E A U have the following meaning:

- flow rate (E);
- sound (A - acoustics);
- endurance (U);
- withstanding stress of alternated pressure from the ceramic cartridges.

The C or Ch characteristics (like comfort, water savings and energy) correspond to the parameters of the products (dimensions, effort to control and water-saving system).

The C characteristic refers to the domestic sector whilst Ch refers to public and commercial places (Care homes, non-medicalised retirement homes...).

The modalities of the classification are specified here below:

		for mechanical mixers		for thermostatic mixers	
Flow E	Q lpm measured under 3 bar	E00	4 lpm ≤ Q < 6 lpm	4 lpm ≤ Q < 6 lpm	
		E0	9 lpm ≤ Q < 12 lpm	9 lpm ≤ Q < 12 lpm	
		E1	12 lpm ≤ Q < 16 lpm	12 lpm ≤ Q < 16 lpm	
		E2	16 lpm ≤ Q < 20 lpm	16 lpm ≤ Q < 20 lpm	
		E3	20 lpm ≤ Q < 25.2 lpm	20 lpm ≤ Q < 25 lpm	
		E4	Q < 25.2 lpm	Q < 25 lpm	
For bath controls, the minimum classification is E3					
Comfort C	Type	C1	Dimensions, effort to control	Dimensions, effort to control	
		C2	Water-saving system	Water-saving system	
		C3	Energy-saving system	Energy-saving system	
Comfort Ch	Type	Ch1	Dimensions	Dimensions	
		Ch2	Water-saving system	Water-saving system	
		Ch3	Energy-saving system	Energy-saving system	
Acoustics A	Lap dB (A)	A1	20dB (A) < Lap ≤ 30 dB (A)	20dB (A) < Lap ≤ 30 dB (A)	
		A2	15dB (A) < Lap ≤ 20 dB (A)	15dB (A) < Lap ≤ 20 dB (A)	
		A3	Lap ≤ 15 dB (A)	Lap ≤ 15 dB (A)	
Endurance U	Number of cycles	U3	Mobile shutter mechanism: 175,000 cycles Mobile spout: 200,000 cycles Shower-bath diverter: 80,000 cycles	Mobile shutter mechanism: 500,000 cycles Thermostatic cartridge: 50,000 cycles Mobile spout: 200,000 cycles Shower-bath diverter: 80,000 cycles

THE ADVANTAGES OF SPECIALIST WATER CONTROLS FOR HEALTHCARE FACILITIES

The DELABIE Group, committed to preserving the future, contributes to sustainable development by **limiting the use of natural resources**.

DELABIE is committed to the environmental approach for buildings in accordance with the main environmental labels such as BREEAM, LEED, HQE, ESTIDAMA, etc.

Water savings

DELABIE's water controls (electronic and time flow) reduce waste and prevent user neglect.

Water volumes are **optimised** to the necessary minimum without altering efficiency and comfort during use.

“Choosing DELABIE products is choosing environmentally friendly products”

Water controls which **shut-off automatically** reduce waste and prevent user neglect.

This is achieved when hands are removed from the detection zone (for electronic controls) or after a timed flow (for time flow controls): 7 seconds for washbasins and WCs, and 30 seconds for showers.

For perfect optimisation of the water resource, **the flow rates** of DELABIE's water controls are **reduced** to 1.4 lpm for washbasins and 6 lpm for showers.

WCs with 3L/6L dual flush and **flush programmes that adapt** to the electronic controls are additional ways to save water.

DELABIE's water controls support **an environmental and ethical approach**

GREEN time flow solutions

DELABIE's time flow controls are made from **sustainable materials that are 100% recyclable**. Their lifespan exceeds 500,000 operations.

Electronic economical solutions

DELABIE's electronic controls require **very little energy** to operate.

The battery-operated versions operate independently for **3 - 6 years** on average.

They use standard, affordable and recyclable batteries.

Effective direct flush system for WCs

Flush valves consume a significant amount of water.

Leaks from cisterns are practically invisible and can quickly inflate the water bill.

DELABIE only develops **direct flush systems without cisterns**. Connected directly to the system, the flush is more effective, with no water stagnation and a reduced risk of leaks. The flush mechanisms are reinforced for intensive use.

The **3L/6L dual flush, which can be adjusted to 2L/4L**, on the time flow versions helps to reduce the water volume. Electronic water controls offer **intelligent flushing** which adapts to the required use.

Sustainable water controls

In addition to their undeniable advantages in terms of sustainable development, they also provide guarantees of **reliability, simple maintenance** and **hygiene**.

Find all our specific solutions for public and commercial places in our dedicated catalogue (DOC 609UK).

THE PRINCIPAL ACCREDITATION SCHEMES FOR BUILDINGS

American LEED Leadership in Energy and Environmental Design

- High environmental quality buildings
- Global evaluation for buildings
- Credit system
- 4 levels of certification

French HQE Haute Qualité Environnementale

- Environmental approach
- Controlling the building's lifecycle
- Points system
- 3 levels of performance

German DGNB Deutsche Gesellschaft für Nachhaltiges Bauen

- Sustainable quality and building development
- Hydro-economic solutions
- New buildings
- Points systems with 3 levels of certification

Middle Eastern ESTIDAMA Sustainable development

- Sustainable way of life
- Methodology for building design
- Preservation of Abu Dhabi
- 3 levels of certification

British BREEAM BRE Environmental Assessment Method

- Sustainable building development
- Environmental performance
- New buildings or refurbishment projects
- Credit system

Dutch BREEAM NL BRE Environmental Assessment Method

- Sustainable building development
- Environmental performance
- New buildings or refurbishment projects
- Credit system

German BNB Bewertungssystem Nachhaltiges Bauen für Bundesgebäude

- Sustainable approach
- Controlling the building's lifecycle
- Public buildings
- Points systems with 3 levels of performance

ENVIRONMENTAL LABELS

The performance levels of DELABIE's water controls, in terms of water and energy savings, help to achieve the highest levels of the international environmental labels.

References prefixed by * are available while stocks last. References are listed in ascending alphanumerical order.

Unless otherwise agreed in writing these conditions constitute the only conditions upon which DELABIE UK Ltd. ("The Company") is willing to supply the goods specified.

The Company does not sell directly to members of the public:

- The price list is provided for guidance only and does not constitute a contract. The wholesalers and installers are free to determine their prices in accordance with current regulations, taking into account their costs, services and warranty costs they bear.
 - The Terms and Conditions are valid for all wholesale customers.
- For all other professionals (manufacturers, export, etc.) or for any special manufacturing request, please contact us.

ORDERS AND QUOTATIONS:

These will be processed in order of receipt. We do not accept open orders or orders for call-off. All orders sent imply acceptance of our general terms and conditions of sale and customers waive any claims that may arise from clauses in their own documentation which may differ. The customer agrees to these terms from the moment that we receive the order, which cannot be cancelled. Orders are accepted without obligation to deliver the order in full in one delivery. Our commercial representatives are not authorised to agree additional terms verbally, or to provide verbal guarantees beyond those provided in the written contract. In the event of default or delayed payment, the Company will be entitled to suspend deliveries or cancel existing orders without any claim for damages from the customer. In the event of a change in circumstances of the buyer, we reserve the right to cancel existing orders or to demand payment guarantees. Our quotes do not amount to specifications; specifiers and professional installers are solely responsible for the choice of products according to their intended use, current regulations and recommended guidelines.

PRICE:

Deliveries are invoiced according to the conditions in place at the date of despatch. Prices are given without guarantee and they may be changed without notice subject to fluctuations in costs, VAT or other taxes, according to the prevailing economic conditions. Price increases will be announced one month prior to their application, and they apply to quotes and orders in hand. Orders will be despatched free-of-charge for all deliveries within mainland UK, excluding express deliveries.

PAYMENTS:

Unless otherwise stated, prices quoted are ex-works and are exclusive of value added tax. All prices will be subject to any value added tax at the appropriate rate. Payment terms, subject to credit approval and prior agreement, are strictly 30 days from invoice date. According to individual credit conditions and/or insurance requirements The Company reserves the right to request payment in advance of despatch of goods on receipt of order. We do not give discounts for early payment.

The company understands and will exercise its statutory right to claim interest and compensation for debt recovery costs under the Late Payment of Commercial Debts (Interest) Act 1998 legislation if invoices are not paid according to agreed credit terms.

In the case of late payment a cash payment may be required, replacing existing conditions.

We will not accept any set-off, only our assets have a legal value.

DELIVERY TIMES:

Despatch dates are indicative only and we shall not be liable for any delay or failure in carrying out our obligations where the delay or failure to deliver is caused by risks of manufacturing or where the cause is beyond our control. Delivery delay will not give rise to compensation payment or goods rejection.

SHIPPING:

Orders are sent to our distributors. We do not deliver to site. The buyer assumes responsibility for carriage and packing costs for deliveries outside mainland UK. The carrier is solely responsible for their delivery, and in the event of delay, missing items, damage or other dispute, the customer must indicate this via the delivery driver's paperwork (either electronically or in hard copy) AND follow up with written notification sent by recorded delivery within 24 hours. A copy of this letter must be addressed to us.

CLAIMS:

No claim will be allowed where the delay in reporting exceeds 8 days following receipt of the goods. The whole of the delivery cannot be rejected because of partial damages and shortages.

PROPERTY IN GOODS:

Notwithstanding any agreed terms of sale, the goods shall remain the property of the seller until payment is made in full. The failure to meet a payment deadline may result in the reclamation of these goods. The buyer assumes the risks of loss or damage, regardless of the means of delivery, as described in "DELIVERY TIMES" and "SHIPPING" above, as well as liability for the damage they might cause.

WARRANTY AND RESPONSIBILITY:

Our finished goods are warranted against any manufacturing defect for a period of 10 years, including electronic controls, excluding other electrical accessories (e.g. hand dryers, etc.) which have a 3-year warranty from the invoice date. This does not apply to products with an expiry date. Spare parts have a one-year warranty. This warranty is limited to replacement or repair of defective components as determined by our workshops in France but excludes the costs of spoilage, handling and carriage or compensation, whatever they are. We are not responsible for handling charges and the cost of returning products to our workshops. Disasters or major water damage as a result of manufacturing defects are covered by our product and/or public liability insurance.

Our warranty and responsibility does not include the following:

- installation that does not comply with the technical specification or current recommended guidelines;
- worn parts;
- non-compliance with installation, user and maintenance guides;
- other factors independent of our products' quality, for example: detergents or abrasive cleaning products, the action of hard water, foreign bodies (e.g. gravel, sand, iron filings, scale, etc.), chemical and electrolytic phenomenon;
- lack of supervision, poor storage or poor maintenance;
- product modifications or actions by the customer, or a third party, without our authorisation using non-DELABIE components and/or consumable items.

products past their expiry date. The water-tightness of connections, joints and the product housing is the responsibility of the professional responsible for installation, and must be guaranteed by them. Warranty excludes joints, valves, washers and rubber seals. However they would be supplied if the warranty application requires them. Any finishes other than chrome or nickel are also excluded from the warranty.

In the event that the product has been discontinued or manufacturing methods have changed and replacements are not available, similar alternative products will be offered. Replacement under warranty will not extend the duration of the original warranty.

Legal warranty of latent defects applies in any event.

SPARE PARTS:

Spare parts and mechanisms that are essential to ensure the correct operation of our products will be held in stock for the duration of the guarantee. They are listed at the back of our catalogues.

RETURNS:

Goods may not be returned to us for credit without our prior written approval obtained by the buyer from the Company and they are received in a good state (determined by our goods inwards department). All transportation costs for returned goods must be paid by the buyer. Goods must be returned to our factory* with good protective packaging. Deliveries less than a month old will be refunded at the invoiced price. For deliveries older than one month, a deduction will be made for checking, handling and administration costs. A repair and re-stocking fee will apply where appropriate.

Product returns are not permitted in the following circumstances: discontinued products, specially manufactured products, technical or aesthetic evolution of the product since the date of purchase, scratched or damaged products, products purchased more than one year previously, products with an expiry date. If sent to DELABIE, those products outside the scope of returns will be immediately destroyed/recycled, and will not be returned to the customer.

The schedule of standard deductions is as follows:

- return less than 1 month: refund at invoiced price
- return between 1 and 3 months: deduction of 15%
- return between 3 months and 1 year: deduction of 30%
- return after 1 year: no refund possible.
- return without prior agreement: additional deduction of 5% of the value of the goods with a minimum value of £50 excl. VAT.

* DELABIE S.A.S.
18, rue du Maréchal Foch
80130 Friville Escarbotin – FRANCE

CLEANING - MAINTENANCE:

Clean with slightly soapy water only, using a soft cloth or sponge, rinse and dry thoroughly. Do not use abrasive or chlorine-based products (with a hydrochloric acid base), or dyes.

PHOTOGRAPHS AND DRAWINGS:

All photos, drawings or illustrations are for illustrative purposes only, without contractual obligation, and may be subject to change without notice. We reserve the right to modify designs and dimensions without notice and without recourse. This applies to all references, dimensions, information contained in various documents, catalogues, installation guides, price lists and websites, which can be modified or discontinued at any time without notice.

INTELLECTUAL PROPERTY AND USE OF CONTENT:

The content (including but not limited to the information, text, graphics, data, images, photos, visuals, videos and soundtrack, and the format of all these elements and our catalogues, websites, etc.) are protected under copyright and/or other intellectual property. The contents are the sole property of their respective editors. Any copying, reproduction, use, adaptation, alteration, modification, translation, dissemination, complete or partial, of content, whether they belong to DELABIE UK Limited or a third party which has granted the rights to DELABIE UK Limited, by any means whatsoever, is illegal except for the limiting rights that are granted below, and/or private copying for the exclusive use of the copier. The content presented in our communication and business tools may be subject to change without notice and are provided without warranty of any kind, express or implied, and cannot give rise to any right to compensation. Protected content may be specifically identified by the following copyright notices: © or "All rights reserved".

The names and logos appearing in our catalogues and websites are registered trademarks. These distinctive marks are the exclusive property of DELABIE UK Limited or third parties who have granted the rights to DELABIE UK Limited. Any use, complete or partial reproduction, or imitation of these marks is prohibited without prior express consent of DELABIE UK Limited.

Alteration and modification of the contents or their use for any purpose other than that authorised, constitute an infringement of DELABIE UK Limited's, or a third party's, property rights. With the following limitations, DELABIE UK Limited grants you the right to download and distribute the content:

- where the download function exists
- for non-commercial purposes
- in good faith
- for maintaining the proprietary notices intact, and for the publication or posting of existing content online, if such information is stated. This right should in no way be interpreted as a trademark or copyright license for the aforementioned content.

PERSONAL DATA PROTECTION:

In line with the General Data Protection Regulation (GDPR), DELABIE is doing everything necessary to limit to a bare minimum the collection of personal data, and its conservation and ensure its protection.

DELABIE only uses this data for its own use for purposes of information and commercialisation of its products. It is not, under any circumstances, given to third parties.

The right of access, rectification, removal and opposition to the processing in addition to the limitation and transferability of your data is possible on request to our Data Protection Officer (DPO) at DELABIE via email (dpo@delabie.fr) or recorded delivery with a photocopy of a photo ID to the following address: DELABIE, Henderson House, Hithercroft Road, Wallingford, OX10 9DG.

To improve our services and for training purposes, calls to DELABIE may be recorded. These recordings will not be retained, and will be systematically deleted within a maximum period of 48 hours.

TERRITORIAL EXCLUSIVITY:

Our wholesalers are authorised to sell in the UK and its offshore territories. For all other countries, the Company has entered into exclusive agreements with import and distribution companies.

In this context, our UK customers cannot sell our products outside their national borders unless they have express agreement from us.

JURISDICTION:

These terms of business are governed by English and Welsh law. Acceptance of an order in stock constitutes a contract under English and Welsh law. All disputes arising from the contract in connection with these terms shall be subject to the exclusive jurisdiction of the English Court, even if there is an appeal and there are multiple defendants, and regardless of the delivery location or stipulated payment. The Company may vary these terms of business from time to time by giving you reasonable written notice. All clauses to the contrary will be considered void by the mere fact of having dealt with our company.
