

2022 MUUZ INTERNATIONAL AWARD WINNER: TEMPOFLUX 3 WC CISTERN-LESS FLUSH SYSTEM

JUST THE RIGHT AMOUNT OF WATER!

DELABIE's TEMPOFLUX 3 WC time flow cistern-less flush system (ref. DELABIE 763030) has won a 2022 Muuz International Award in the "Interior fittings" category.

The award

The Muuz International Awards (MIAW) are organised by Muuz, in partnership with the d'a magazine. Each year, they recognise the most outstanding products in architecture, interior design and decoration.

They highlight the most creative manufacturers and ensure that the chosen products are placed in the spotlight. To establish the winners of this, the 10th edition, the editorial team at Muuz considered 350 innovative ideas. The products were evaluated according to 4 main criteria: design, originality, use and technicality.

Installation example:
TEMPOFLUX 3 WC direct flush system
Ref.s 763BOX + 763030

The product

More hygienic than WCs with cisterns, WCs with the direct flush system protect against the risk of bacterial development. Removing the cistern avoids water stagnation as well as the build-up of scale and impurities in the installation. This also removes the risk of leaks related to the plastic mechanisms found in cisterns, which frequently get damaged. DELABIE's cistern-less flush system is highly effective, and guarantees complete user comfort. Since it connects directly to the mains supply, there is no cistern to refill so it can be activated without having to wait. The WC flush system also offers a very short rinse which is ideal for high footfall areas in Public Places.

The TEMPOFLUX 3 WC time flow direct flush system is dressed to impress, featuring a black glass control plate which has been specifically designed for Public Places. In addition to its resolutely timeless design, it offers a high degree of comfort for users. Thanks to its chrome-plated 3L/6L push-button, the appropriate flush volume can be delivered, saving potable water. Its soft-touch push-button can be operated by any user: from children to elderly people, including people with reduced mobility. To avoid deliberate abuse and waste, it features an anti-blocking AB system which prevents the valve from being held in the open position. The flush only takes place once the push-button is released.

The TEMPOFLUX 3 WC control plate is located on a recessed housing which is 100% watertight. This assembly can be installed in several ways: fixed onto plasterboard rails by the sides; onto walls from the front; and also onto frame systems.

Wall thickness is no longer a problem since the housing can be cut to size, adapting to finishes from 10 to 120mm thick.

As efficient as it is stylish, the TEMPOFLUX 3 WC cistern-less flush system ticks all the boxes for creating extraordinary Public Places out of the ordinary!
